LAB: CAPABILITIES OF MICROSOFT COMPLIANCE SOLUTIONS

1.1 INTRODUCTION

I started the module with the required lab setup by pressing Ctrl + Alt + Delete to bring up the logon page. I then logged in as admin using the provided password and clicked on Next to proceed to the lab

1.2 LAB 1:SETUP OF THE MICROSOFT 365 TENANT

LAB SCENARIO

This setup lab consisted of enabling the Microsoft Audit Log and file monitoring capabilities in the Microsoft 365 tenant.

Step 1

I opened Microsoft Edge and entered the url provided.

Step 2

I signed in with the admin credentials for the Microsoft 365 tenant provided by the authorized lab hoster (ALH)

Step 3

From the left navigation pane of the Microsoft 365 admin center, I selected Show all.

Step 4

Under Admin centers, I selected Security and a new browser page opened to the welcome page of Microsoft Defender.

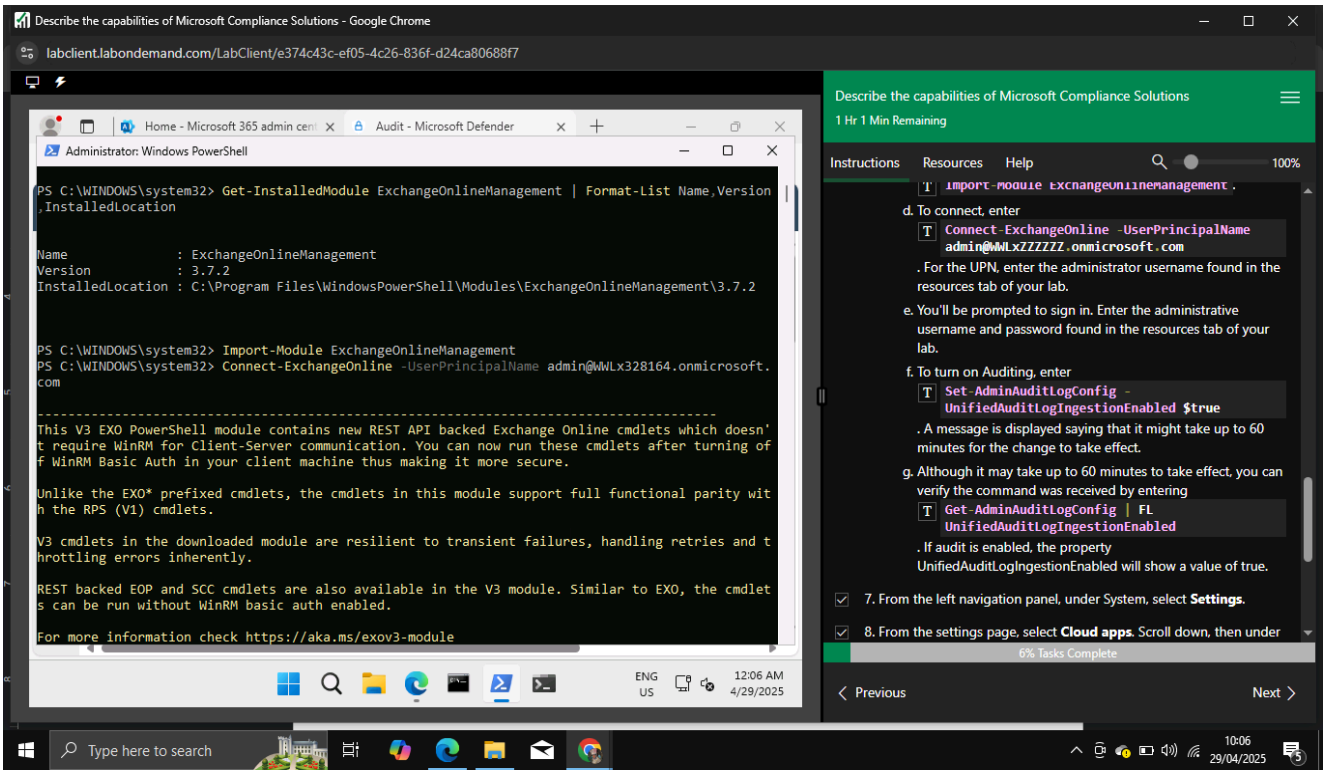
Step 5

In the left navigation panel, I scrolled down and expanded on System. From the expanded list, I selected Audit.

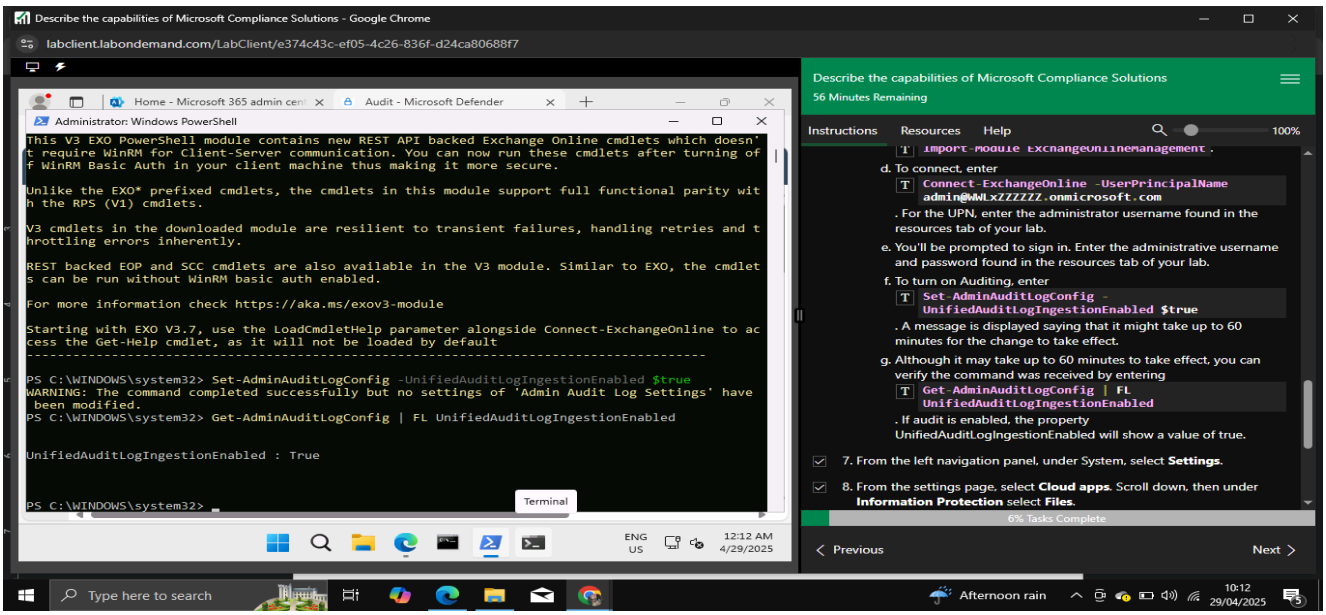
Step 6

In this step,auditing was already enabled.I went ahead to confirm that the Exchange Online PowerShell module is installed on the computer, loaded and connected to it.

Here is my screenshot



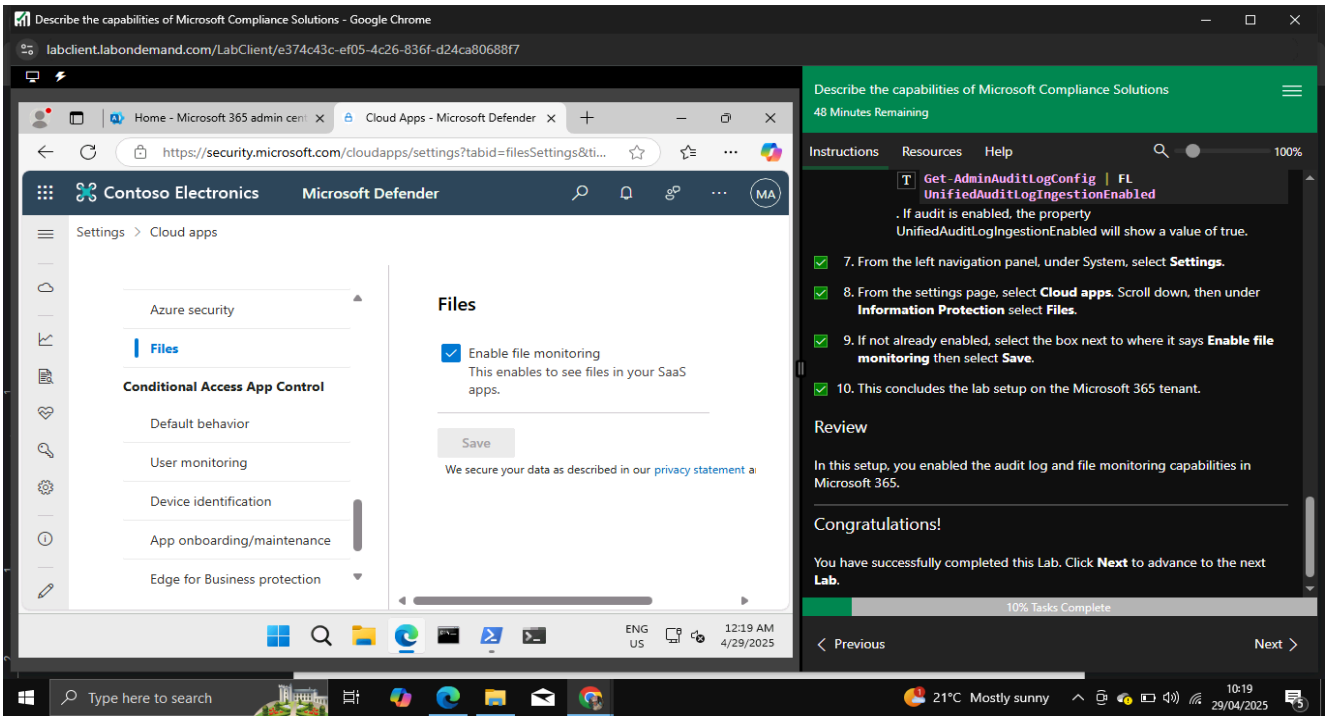
I also verified that audit is enabled, the property UnifiedAuditLogIngestionEnabled shows a value of true. Here is my screenshot



Step 7,8,9 and 10

From the left navigation panel under system, I selected settings then cloud apps, under information protection, I selected files, enabled file monitoring and saved.

Here is my screenshot



1.3 LAB 2:EXPLORE THE SERVICE TRUST PORTAL

LAB SCENARIO

In this lab, I explored the features and content available from the Service Trust Portal. I also visited the Trust Center to view information about Privacy at Microsoft.

TASK 1

In this task, I explored the Service Trust portal and the different types of content available, I learned how to access reports, and how to save reports to the library.

Step 1

I opened Microsoft Edge

Step 2

In the address bar, I enterED aka.ms/STP. This took me to the landing page for the Service Trust Portal.

Step 3

I Signed in, using my Tenant admin credentials

Step 4

From the Certifications, Regulations, and Standards category I selected ISO/IEC

Step 5

I Selected the ellipsis under the More Options header for the first document on the list and noted the different options.

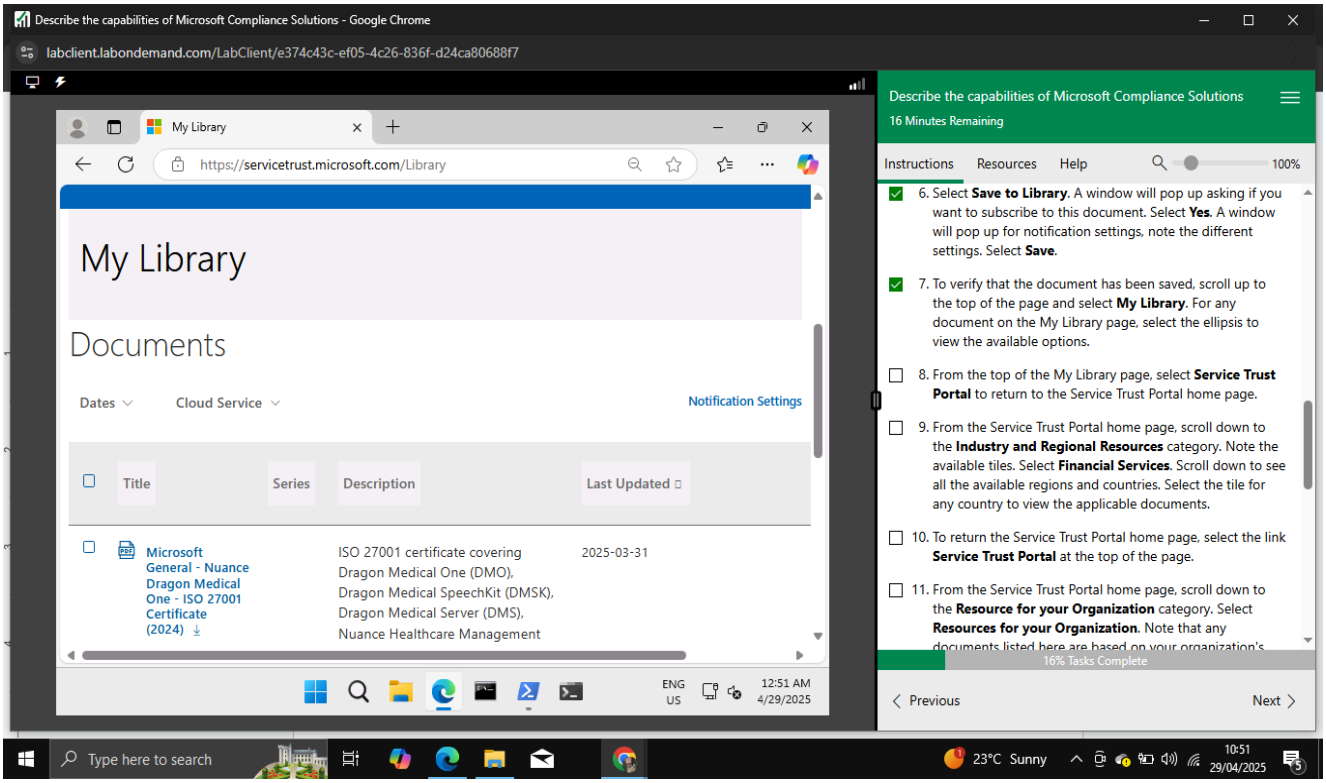
Step 6

I selected “Save to Library”,A window pops up asking if I want to subscribe to a document.I Selected Yes. Another window pops up for notification settings,I noted the different settings and selected Save.

Step 7

To verify that the document had been saved,I scrolled up to the top of the page and selected My Library.

Here is my screenshot



Step 8

From the top of the My Library page, I selected Service Trust Portal to return to the Service Trust Portal home page.

Step 9

From the Service Trust Portal home page, I scrolled down to the Industry and Regional Resources category. Selected Financial Services. Scrolled down to see all the available regions and countries. I selected the tile for China to view the applicable documents.

Step 10

I selected the link Service Trust Portal at the top of the page to return to the Service Trust Portal home page.

Step 11

From the Service Trust Portal home page,I scrolled down to the Resource for your Organization category and selected it.

Step 12

To return the Service Trust Portal home page, I selected the link Service Trust Portal at the top of the page.

TASK 2

In this task,I visited the Trust Center and navigated to information that describes Privacy at Microsoft.

Step 1

From the Service Trust Portal home page,I scrolled down to the Reports, Whitepapers, and Artifacts category. Selected tPrivacy and Data Protection.

Step 2

In addition to listing all applicable documents, there was a description of the category followed by a link to Learn more.I Selected Learn more.

Step 3

A new browser page opened to the Microsoft Trust Center where I found more information, including information about privacy and much more. I Explored the contents of that page and navigated through different links.

Step 4

I closed all the open browser tabs and proceeded to the next lab.

1.4 LAB 3:EXPLORE THE MICROSOFT PURVIEW PORTAL AND COMPLIANCE MANAGER

LAB SCENARIO

In this lab,I explored the Microsoft Purview portal home page and ways in which the capabilities of Compliance Manager can help organizations improve their compliance posture.

TASK 1

I explored the Microsoft Purview portal home page.

Step 1

I opened the Microsoft Edge and entered the link provided

Step 2

I signed in with my admin credentials

Step 3

From the left navigation pane of the Microsoft 365 admin center,I selected Show all.

Step 4

Under Admin centers, I selected Compliance,A new browser page opened with a pop-up window welcoming me to the new Microsoft Purview portal. At the bottom of the page,I selected the box next to I agree to the terms of data flow disclosure and Privacy statements, then Get started.

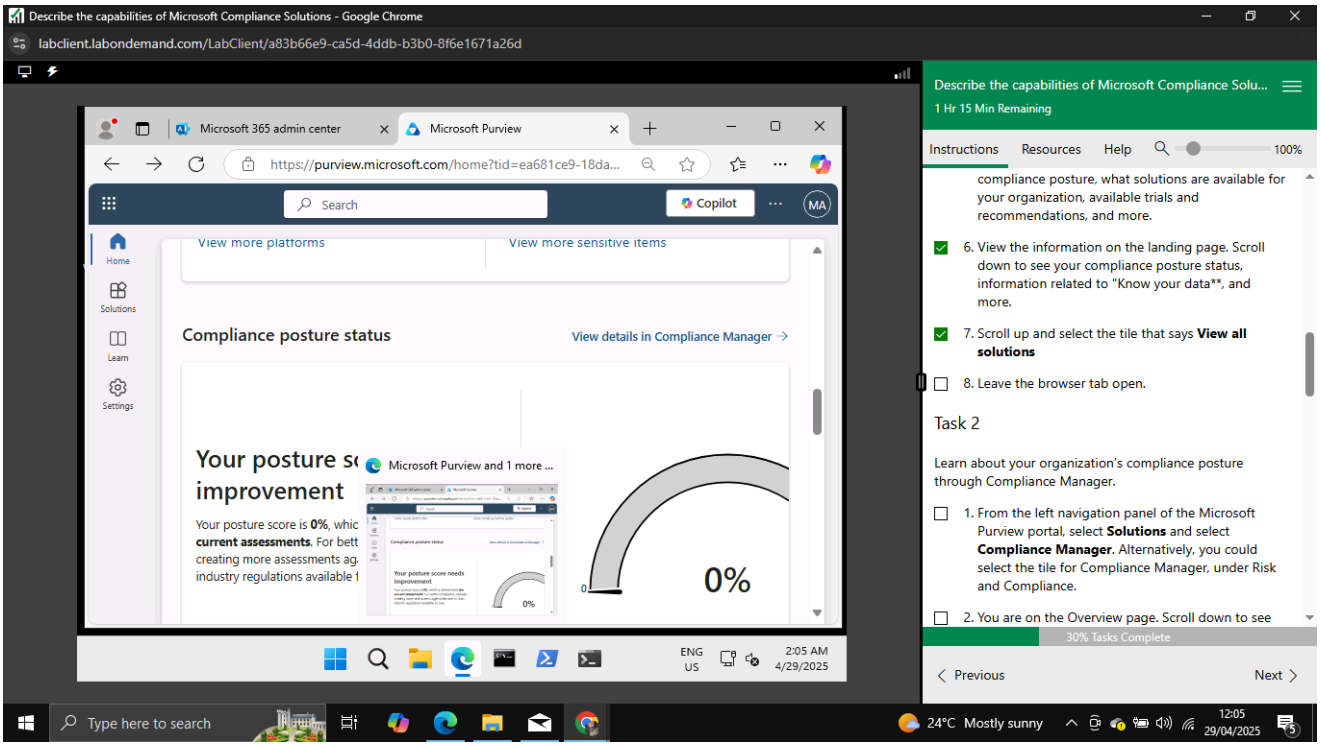
Step 5

The card section on the home page showed, at a glance, how the organization is doing with compliance posture, what solutions are available for the organization, available trials and recommendations, and more.

Step 6

I viewed the information on the landing page. Scrolled down to see compliance posture status, information related to "Know your data", and more.

Here is my screenshot



Step 7 and 8

I Scrolled up and selected the tile,"View all solutions" and left the browser tab open.

TASK 2

I learned about your organization's compliance posture through the Compliance Manager.

Step 1

From the left navigation panel of the Microsoft Purview portal,I selected Solutions then Compliance Manager.

Step 2

On the overview page. I scrolled down to see all the information available on the page, including compliance score, points achieved, and Microsoft managed points achieved.I saw Key improvement actions, Solutions that affect score and compliance score breakdown by categories.

Step 3

From the left navigation pane, I selected Improvement actions. These are actions that can improve the organization's compliance score.

Step 4

From the list of improvement actions,I selected the first item and reviewed the available information for the improvement action.

Step 5

I exited out of improvement action by selecting Improvement Actions from the breadcrumb on the top-left of the page and was taken back to the improvement actions page.

Step 6

From the left navigation pane, I selected Solutions. On this page, I saw how solutions contribute to my score and their remaining opportunity for improvement.

Step 7

From the left navigation pane, I selected Assessments and saw the Data Protection Baseline for Microsoft 365.

Step 8

I selected Data Protection Baseline and noticed the information available on the progress tab

Step 9

From the left navigation pane,I selected Regulations. This page lists the regulations available to the organization

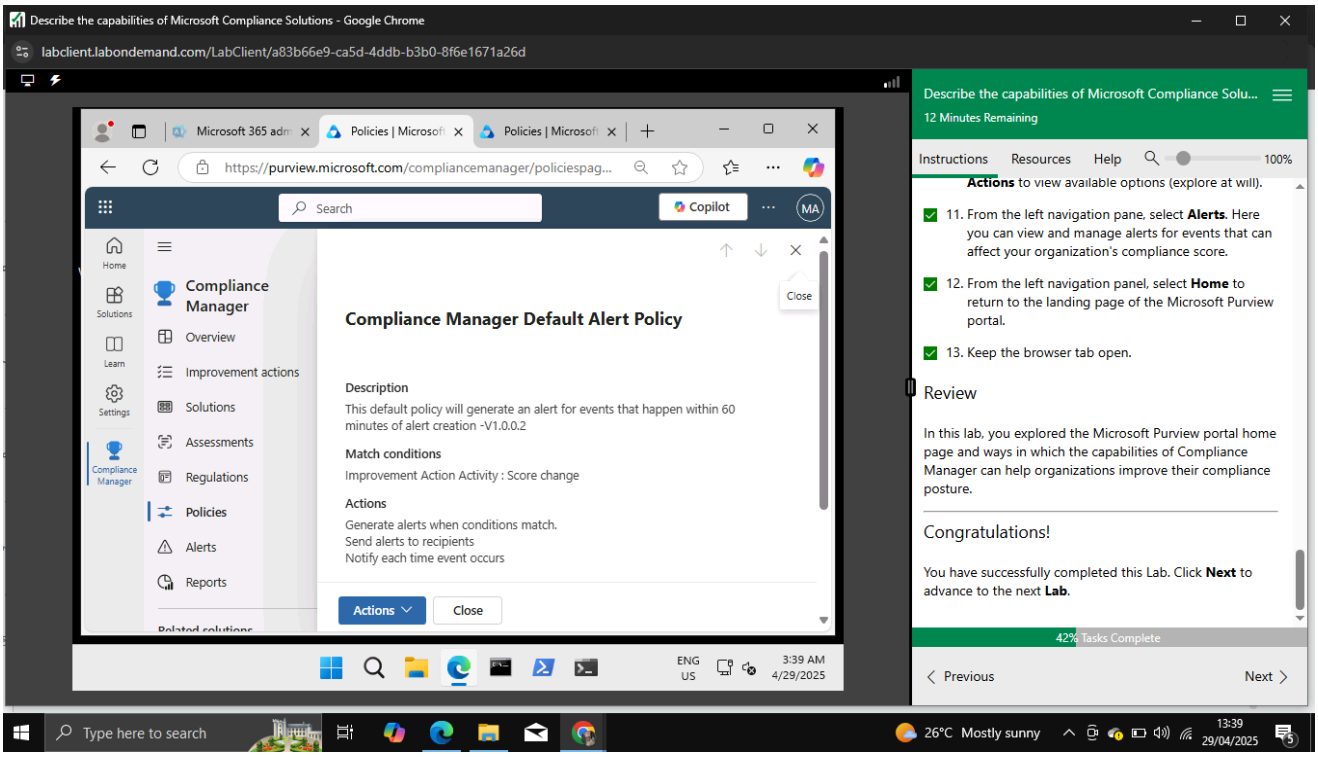
Step 10

From the left navigation pane,I selected Policies and the Compliance Manager Default Alert Policy to view details about the policy. I selected Actions to view available options.

Step 11

From the left navigation pane, I selected Alerts. Here you can view and manage alerts for events that can affect your organization's compliance score

Here is my screenshot



Step 12

From the left navigation panel, I selected Home to return to the landing page of the Microsoft Purview portal and kept the browser tab open.

1.5 LAB 4:EXPLORE SENSITIVE LABELS IN MICROSOFT PURVIEW

LAB SCENARIO

In this lab, I explored the capabilities of sensitivity labels. Went through the settings for existing sensitivity labels that have been created and the corresponding policy to publish the label. Then I saw how to apply a label and the impact of that label, from the perspective of a user.

TASK 1

In this task, I gained an understanding of what sensitivity labels can do by going through the process of creating a new label and creating a policy to publish the label

Step 1

I opened the browser tab for home page of Microsoft Purview

Step 2

From the left navigation pane of the Microsoft 365 admin center, I selected Show all then Compliance. A new browser page opened to the welcome page of the Microsoft Purview portal.

Step 3

In the left navigation panel,I selected solutions then Information protection.

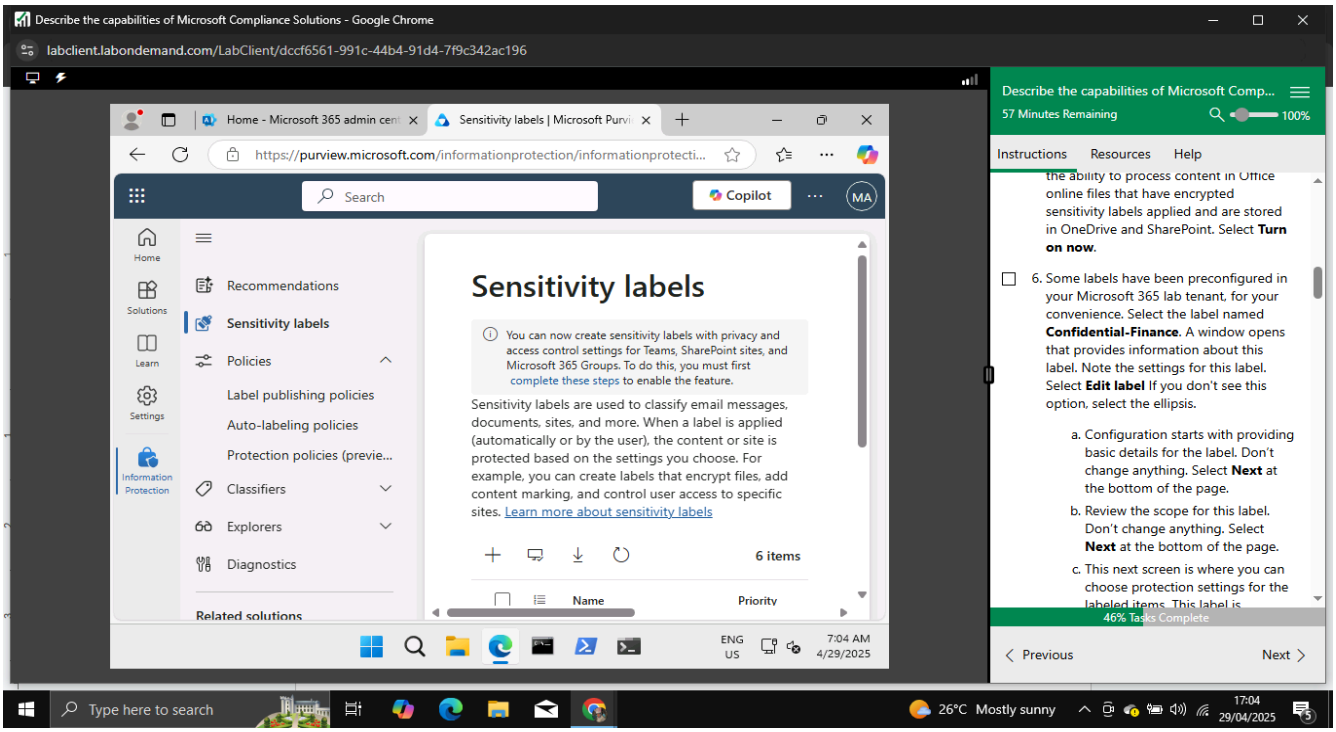
Step 4

From the left navigation panel,I selected sensitivity labels

Step 5

I selected Turn on now on the yellow banner that indicated that the organization has not turned on the ability to process content in Office online files that have encrypted sensitivity labels applied and are stored in OneDrive and SharePoint.

Here is my screenshot



Step 6

I selected the label named Confidential-Finance. A window opened that provided information about the label. I noted the settings for the label and selected the Edit label to view the options therein.

Step 7

From the left navigation pane, I expanded Policies then selected Publishing policies

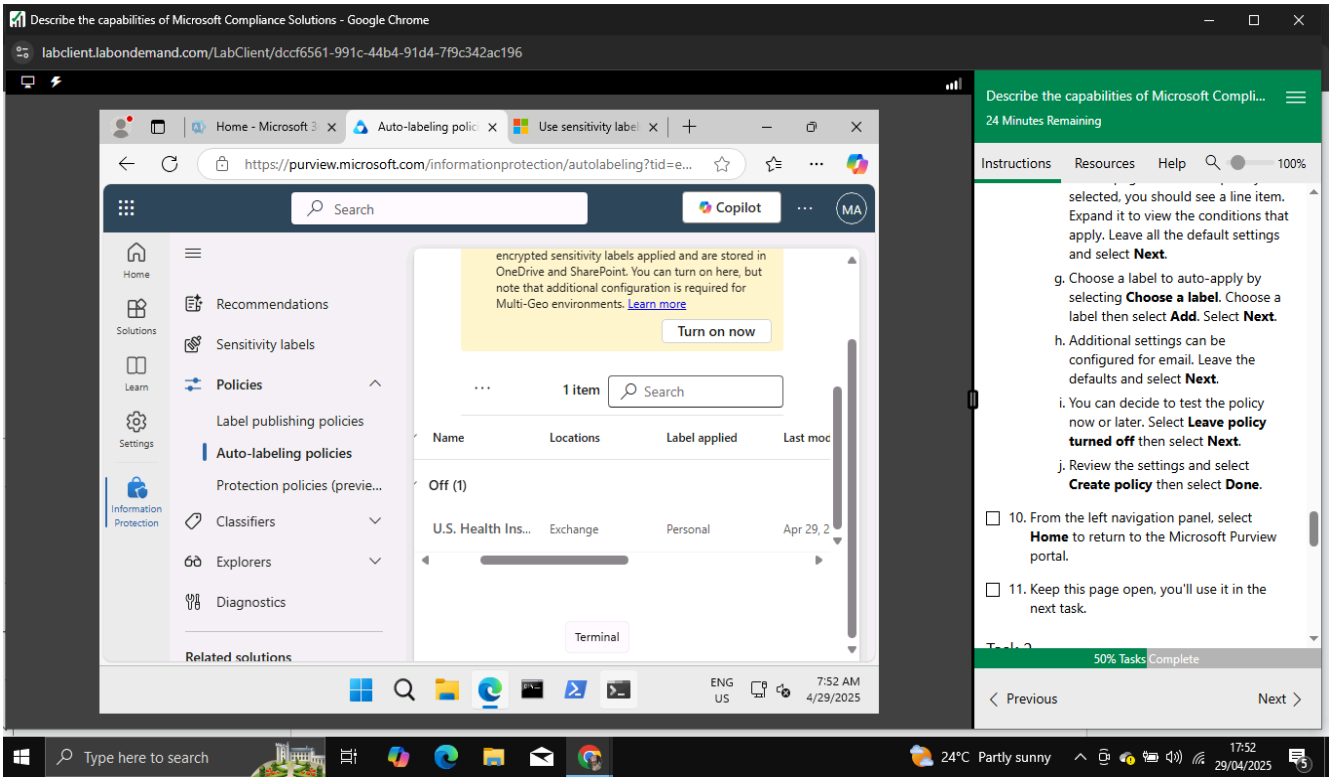
Step 8

I selected Confidential-Finance Policy. A window opened that provided information about the policy. I selected the Edit policy from the top of the window and walked through the settings without changing anything.

Step 9

From the left navigation panel, under Information protection, I selected Auto-labeling. And reviewed the description on it.I noted that I can create auto-labeling policies to automatically

apply sensitivity labels to email messages or OneDrive and SharePoint files that contain sensitive info.I selected Create auto-label policy and walked through the steps to create a new policy.
Here is my screenshot



Step 10 and 11

From the left navigation panel,I selected Home to return to the Microsoft Purview portal and kept this page open, as I would use it in the next task.

TASK 2

In this task, I went through the process of applying a sensitivity label to a Microsoft Word document and viewed the content marking (watermark) that was generated by the label.

Step 1

I navigated to the home page for the Microsoft Purview Portal

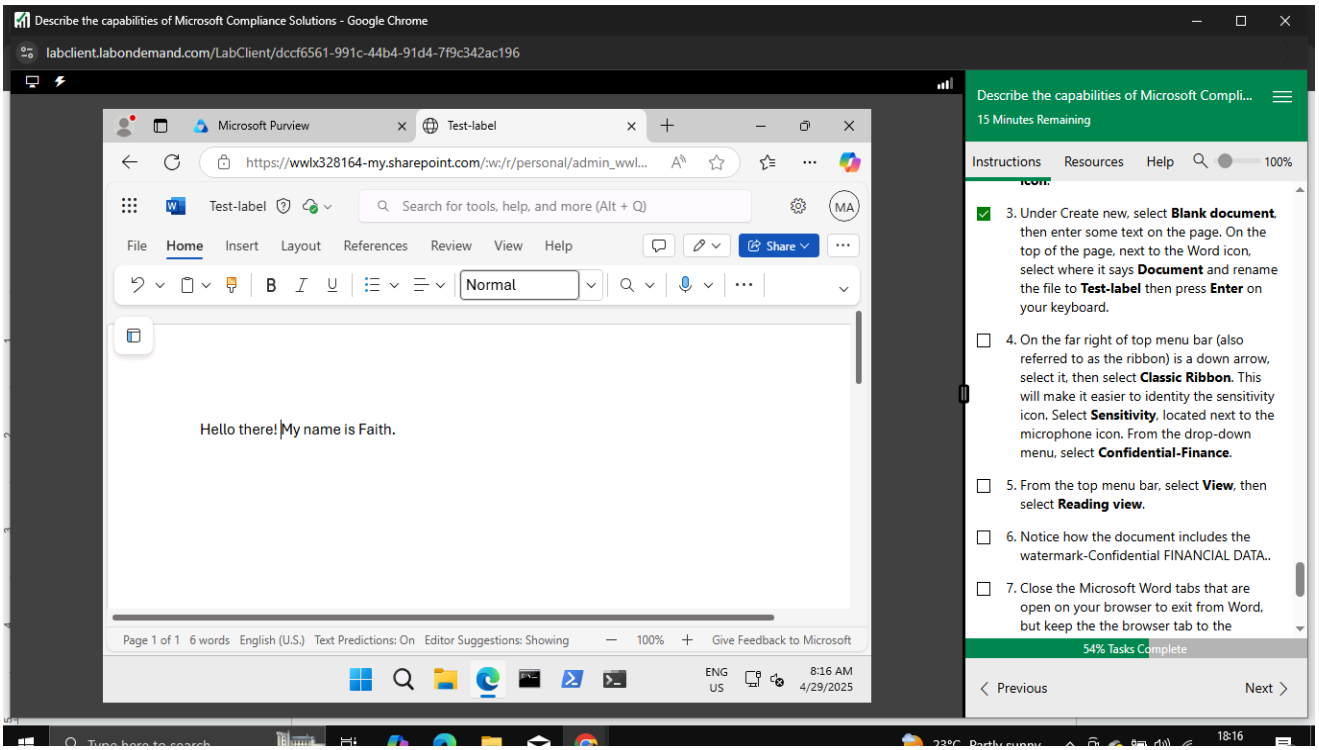
Step 2

From the Microsoft Purview portal,I selected the app launcher icon, next to where it says Microsoft Purview. Selected the Word icon.

Step 3

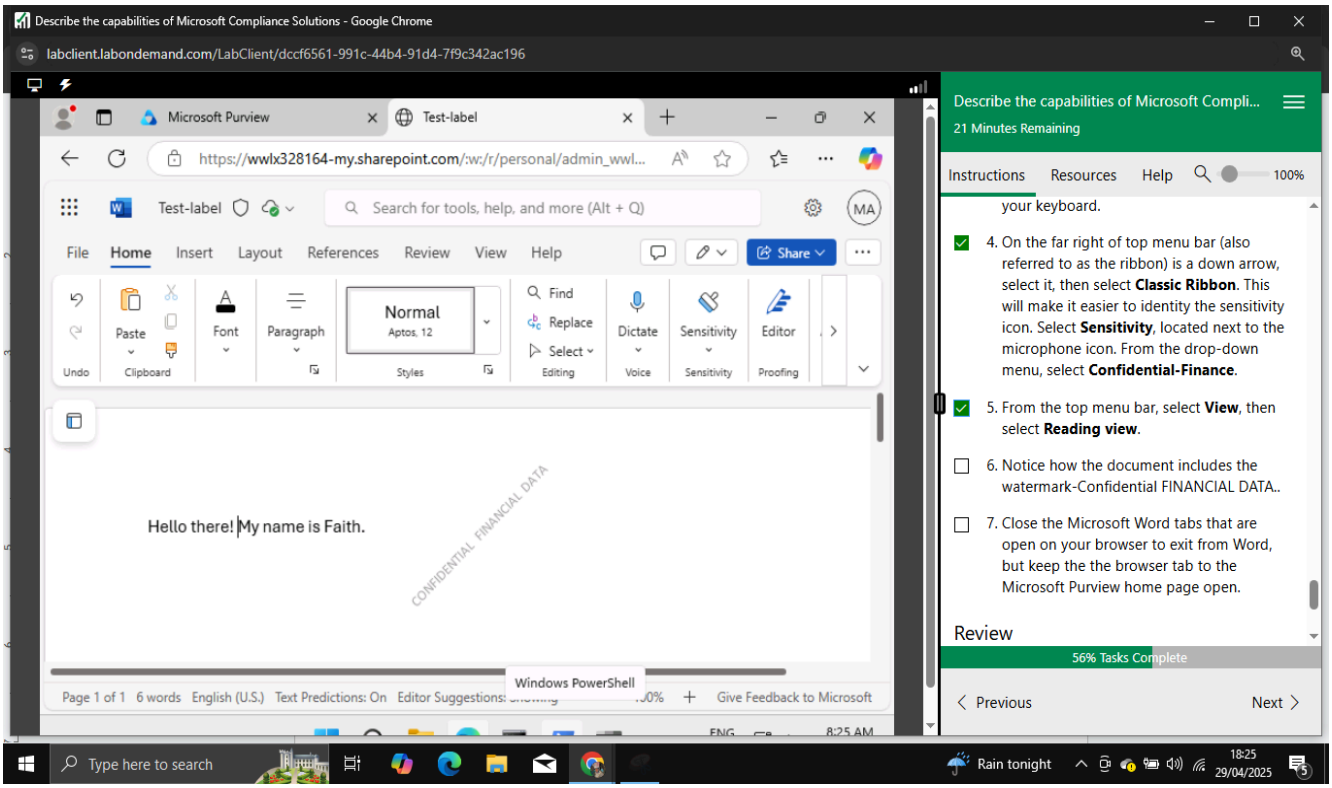
Under Create new,I selected the Blank document, then entered some text on the page. On the top of the page, next to the Word icon, I selected where it says Document and renamed the file to Test-label then pressed Enter on the keyboard.

Here is my screenshot



Step 4

I selected the down arrow on the far right of the top menu bar,then Classic Ribbon, Sensitivity, located next to the microphone icon. From the drop-down menu, I selected Confidential-Finance.
Here is my screenshot



Step 5 and 6

From the top menu bar, I selected View, then Reading view and noticed that the document included the watermark-Confidential FINANCIAL DATA.

Step 7

I closed the Microsoft Word tabs that were open on the browser to exit from Word, but kept the browser tab to the Microsoft Purview home page open.

1.6 LAB 5:EXPLORE INSIDER RISK MANAGEMENT IN MICROSOFT PURVIEW

LAB SCENARIO

In this lab, I walked through the process of setting up an insider risk policy, along with the basic prerequisites to configure and use insider risk management policies.

TASK 1

In this task, as the global administrator,I would enable permissions for Insider Risk Management. Specifically, I'd add users to the Insider Risk Management role group to ensure that designated users can access and manage insider risk management features.

Step 1

I opened the browser tab for home page of Microsoft Purview

Step 2

From the left navigation pane of the Microsoft 365 admin center, I selected Show all then selected Compliance. A new browser page opened to the welcome page of the Microsoft Purview portal.

Step 3

From the left navigation panel, I selected Settings, expanded Roles & scopes then selected Role groups.

Step 4

In the search field, on the top right of the page, I typed Insider risk and Enter. I selected Insider risk management and reviewed the description.

Step 5 and 6

From the left navigation panel, I selected Home to return to the Microsoft Purview portal page and left the browser tab open.

TASK 2

In this task,I walked through the settings associated with the Insider Risk Management solution. Insider risk management settings apply to all insider risk management policies, regardless of the template you choose when creating a policy.

Step 1

I navigated to the Microsoft Purview portal home page.

Step 2

From the left navigation pane, I selected Settings thenInsider Risk Management. Here I explored some of the available settings.

Step 3

From the left navigation pane,I selected Solutions, then Insider Risk Management.

Step 4

I left the browser window open.

TASK 3

In this task, I walked through the settings for creating a policy.

Step 1

I navigated to the overview page for Insider risk management

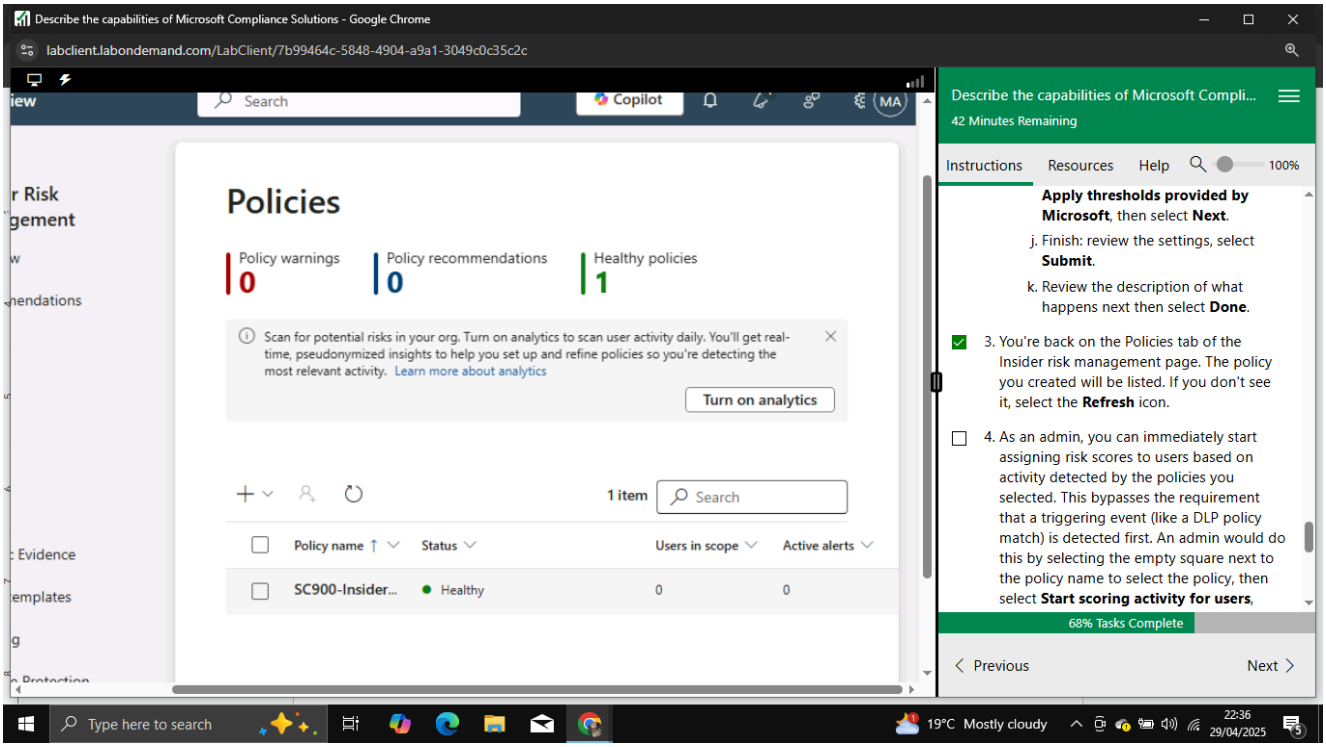
Step 2

From the Insider risk management overview page, I selected the Policies tab then selected + Create policy and configured each of the policy tabs as listed.

Step 3

On the Policies tab of the Insider risk management page. The policy I created is listed.

Here is my screenshot



Step 4

I selected the empty square next to the policy name to select the policy, then selected Start scoring activity for users, which was shown above the policy table

Step 5

From the left navigation panel, I selected Home to return to the landing page of the Microsoft Purview portal and kept the browser window open.

1.7 LAB 6:EXPLORE EDISCOVERY

LAB SCENARIO

In this lab I went through the steps required for setting up eDiscovery, including setting up role permissions, creating an eDiscovery case, creating an eDiscovery hold and creating a search query.

TASK 1

In this task, as the global admin, I added specific users as members of the eDiscovery Manager role group.

Step 1

I opened the browser tab for home page of Microsoft Purview

Step 2

From the left navigation pane of the Microsoft 365 admin center,I selected Show all then Compliance.

Step 3

From the left navigation pane, I selected Settings, expanded Roles and scopes, then selected Role groups.

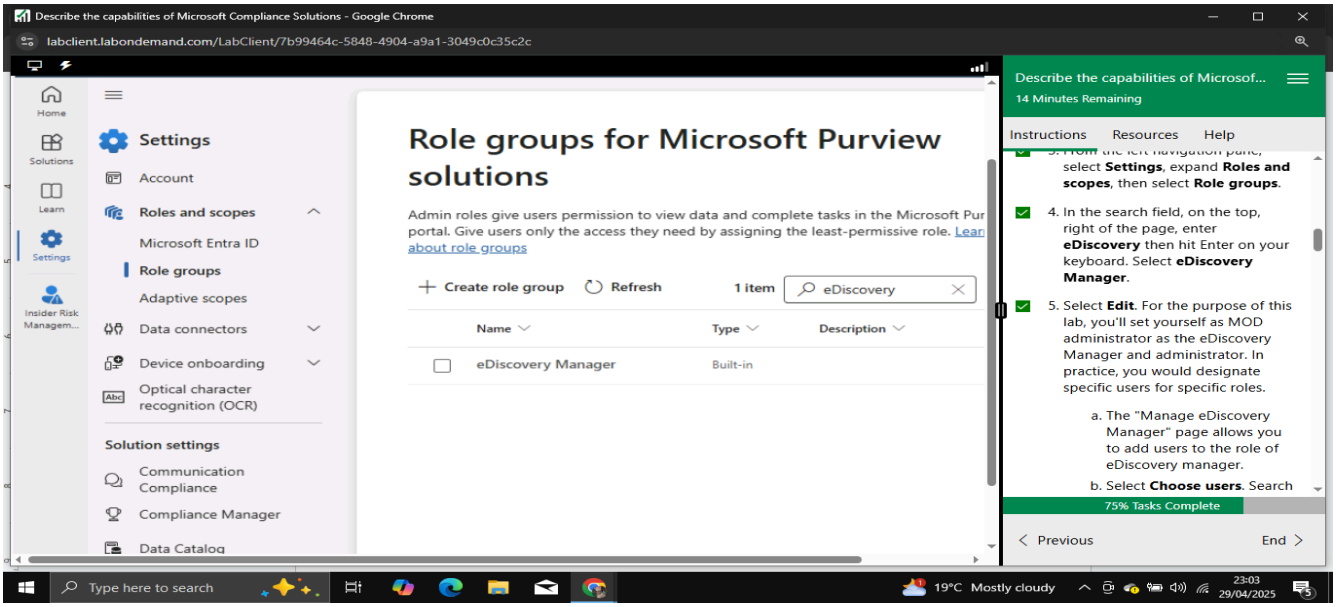
Step 4

In the search field, on the top, right of the page, I entered eDiscovery then hit Enter on my keyboard. I then selected eDiscovery Manager.

Step 5

I selected Edit. For the purpose of the lab, I set myself as MOD administrator as the eDiscovery Manager and administrator. In practice, I would designate specific users for specific roles.

Here is my screenshot



Step 6

I kept the browser tab open as I would use it in the next task

TASK 2

In this task, as an eDiscovery Administrator (MOD admin is an eDiscovery administrator), I would create a case to start using eDiscovery (Standard)

Step 1

I navigated to the compliance portal roles page

Step 2

From the left navigation panel, under Solutions, I expanded eDiscovery then selected Standard Cases.

Step 3

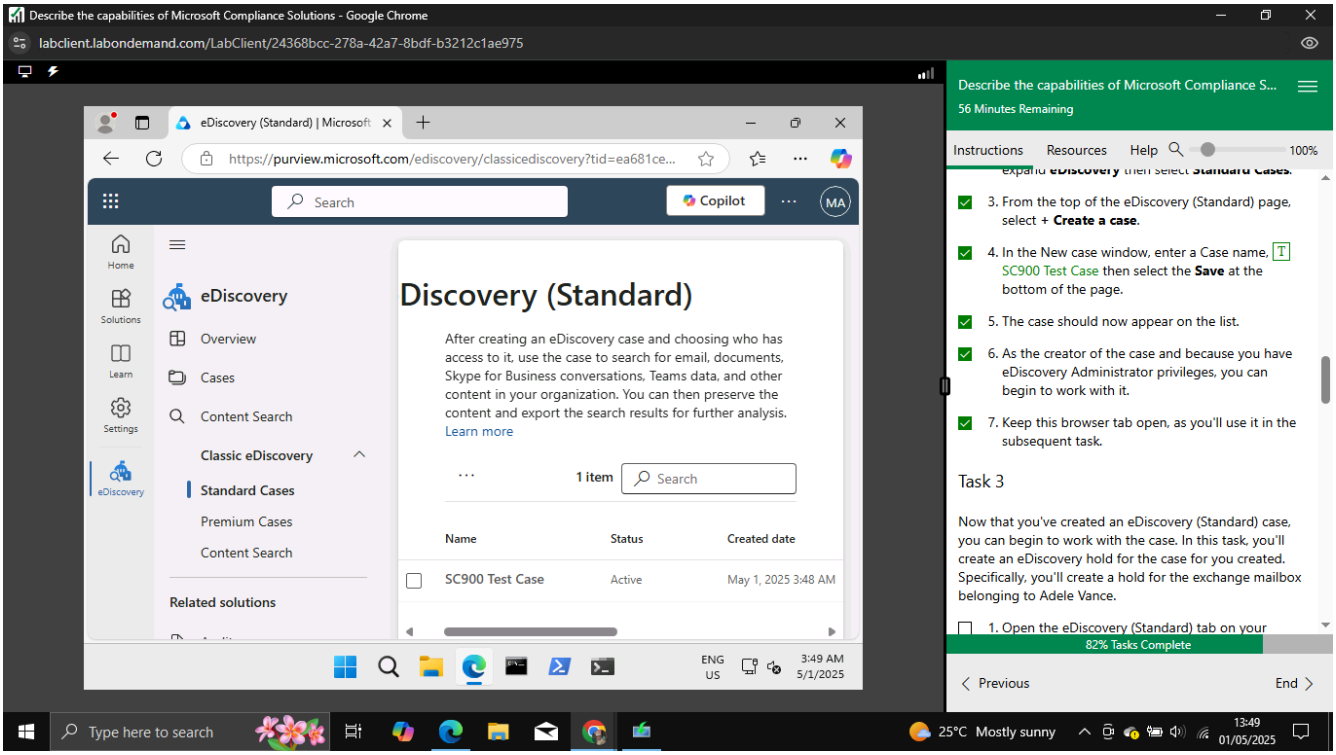
From the top of the eDiscovery (Standard) page,I selected + Create a case.

Step 4

In the New case window,I entered a Case name then selected the Save at the bottom of the page

Step 5

The case appeared on the list.Here is my screenshot



Step 6 and 7

As the creator of the case and because I have eDiscovery Administrator privileges, I can begin to work with it.I kept the browser window in the previous task open as I would use it in the subsequent tasks.

TASK 3

In this task, I created an eDiscovery hold for the case I created. Specifically, I created a hold for the exchange mailbox belonging to Adele Vance.

Step 1

I opened the eDiscovery (Standard) tab on my browser

Step 2

From the eDiscovery (Standard) page,I selected the case I created in the previous tab, SC900 Test Case.

Step 3

From the Home page of the case, I selected the Hold tab then +Create.

Step 4

In the name field,I entered the name provided and Next.

Step 5

In the Choose locations page, I selected toggle switch next to Exchange mailboxes to set the status to On.

Step 6

I selected Choose users, groups, or teams. In the search box, entered Adele then pressed enter on my keyboard. From the search results selected Adele Vance, then Done.

Step 7

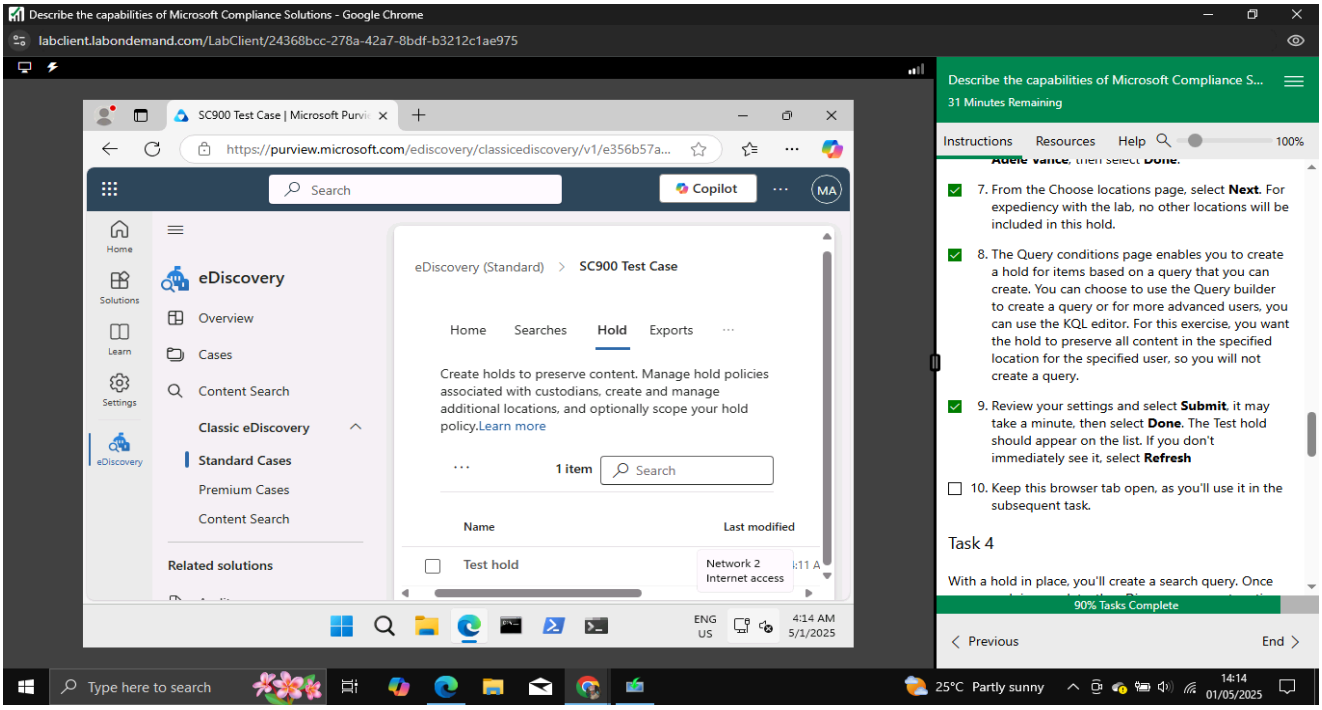
From the Choose locations page,I selected Next

Step 8

For this exercise, I wanted the hold to preserve all content in the specified location for the specified user, so I did not create a query.

Step 9

I reviewed my settings and selected Submit, then Done.The Test hold appeared on the list



Step 10

I kept the browser tab open as I would use it in the subsequent task.

TASK 4

With a hold in place, I would create a search query. Once your search is complete, the eDiscovery supports actions, such as exporting and downloading the results for future investigation.

Step 1

I opened the SC900 Test Case tab on my browser

Step 2

From the SC900 Test Case page, selected Searches.

Step 3

From the Search page, I selected + New Search.

Step 4

In the Name field,I entered the name provided then selected Next from the bottom of the page.

Step 5

In the Choose locations page,I selected locations on hold and unselected Add App Content for On-Premises users, as my lab environment had no on-premises users, then selected Next.

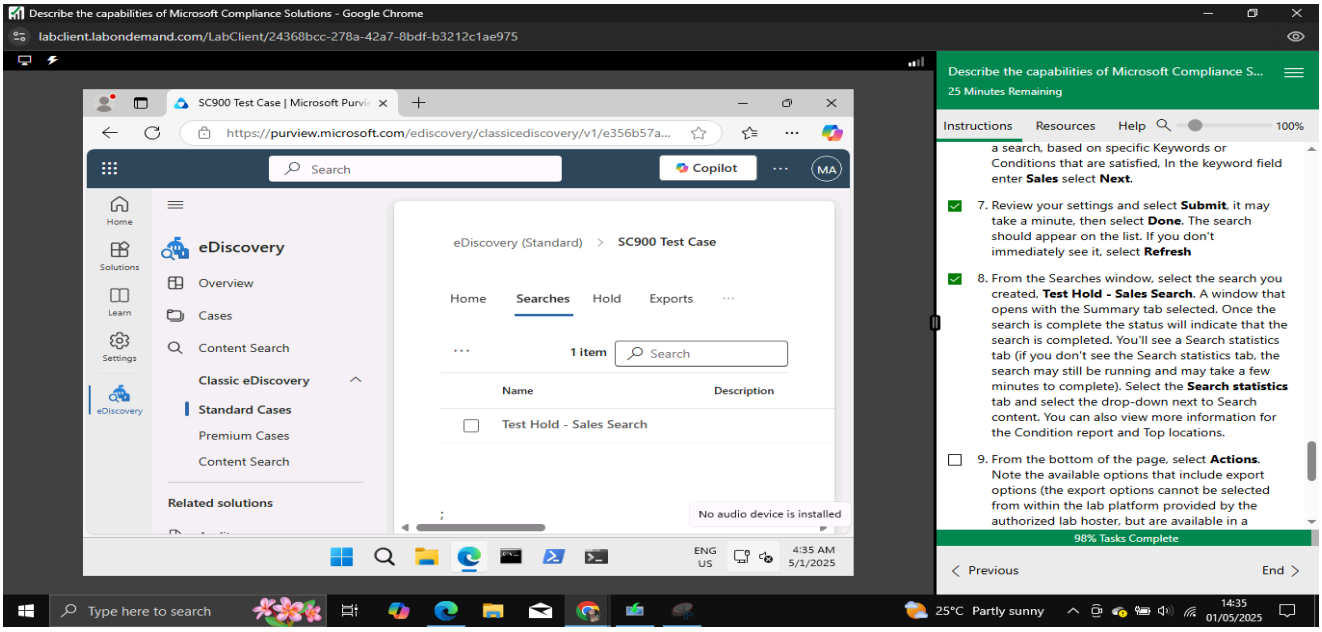
Step 6

The Query conditions page enables you to create a search, based on specific Keywords or Conditions that are satisfied, In the keyword field I entered Sales and selected Next.

Step 7

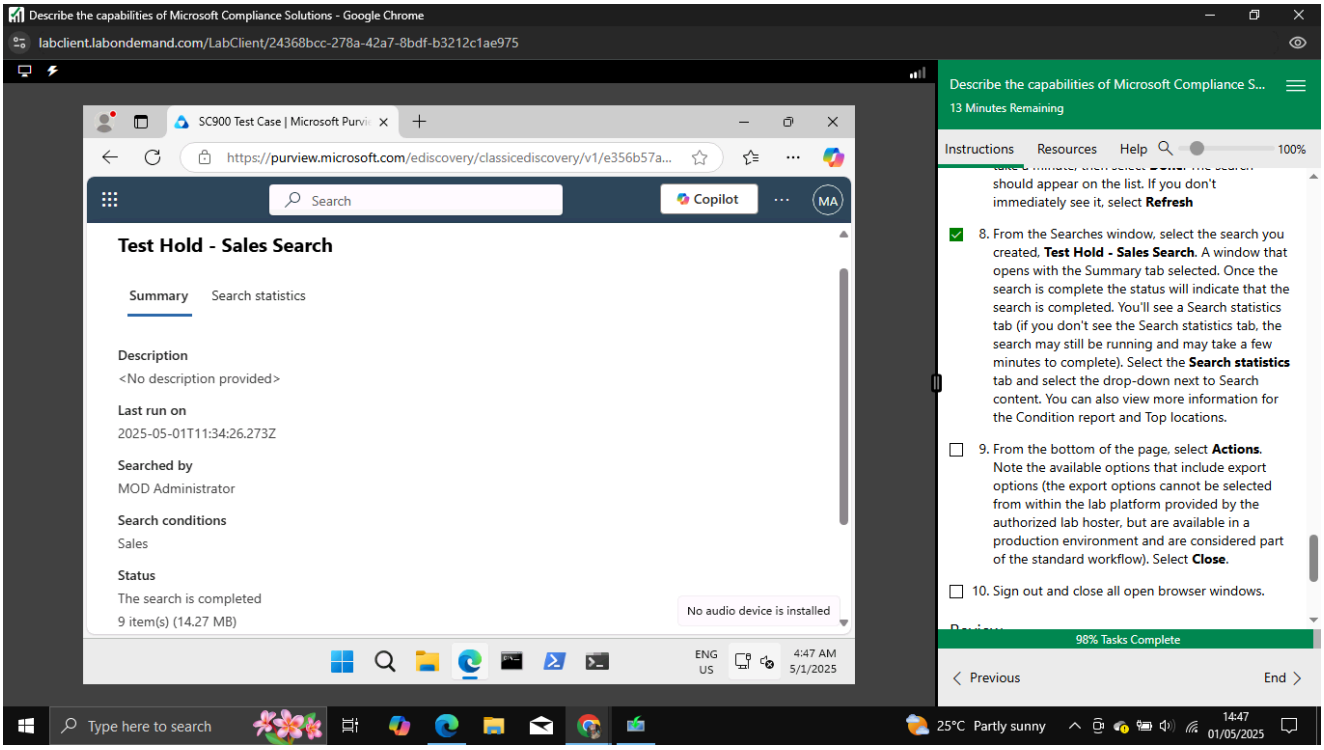
I Reviewed my settings, selected Submit, and Done. The search appeared on the list.

Here is my screenshot



Step 8

From the Searches window, I selected the search I created, Test Hold - Sales Search. A window opened with the Summary tab selected.Once the search was complete the status indicated that the search was completed.Here is my screenshot



I selected the Search statistics tab and the drop-down next to Search content.I also viewed more information for the Condition report and Top locations.

Step 9

From the bottom of the page, I selected Actions. Noted the available options and selected close

Step 10

I signed out and closed all open browser windows.

1.8 CONCLUSION AND SUMMARY

Through these hands-on labs, I gained practical experience with key Microsoft 365 compliance and security tools. I learned how to enable and monitor audit logs to track user activities and system changes. I explored the Service Trust Portal and Microsoft Purview to better understand compliance and privacy management. I also implemented sensitivity labels and insider risk policies to protect organizational data. Finally, I practiced using eDiscovery to manage data for legal investigations and governance.
