LAB: CAPABILITIES OF MICROSOFT IDENTITY AND ACCESS MANAGEMENT SOLUTION

1.1 INTRODUCTION

I Started the module with the required lab setup by pressing Ctrl + Alt + Delete to bring up the logon page. I then logged in as admin using the provided password and clicked on Next to proceed to the lab.

1.2 LAB 1:SET UP OF MICROSOFT 365 TENANT

LAB SCENARIO

This lab setup required me to enable the Audit log and file monitoring capabilities in Microsoft 365.

Step 1

I then moved on to step 1 where I was required to open Microsoft Edge and on the address bar enter the link provided.

Step 2

I then signed in with the admin credentials for the Microsoft 365 tenant provided by the authorized lab hoster (ALH).

Step 3

Here;I was required to select show all from the left navigation pane of the Microsoft 365 admin center.

Step 4

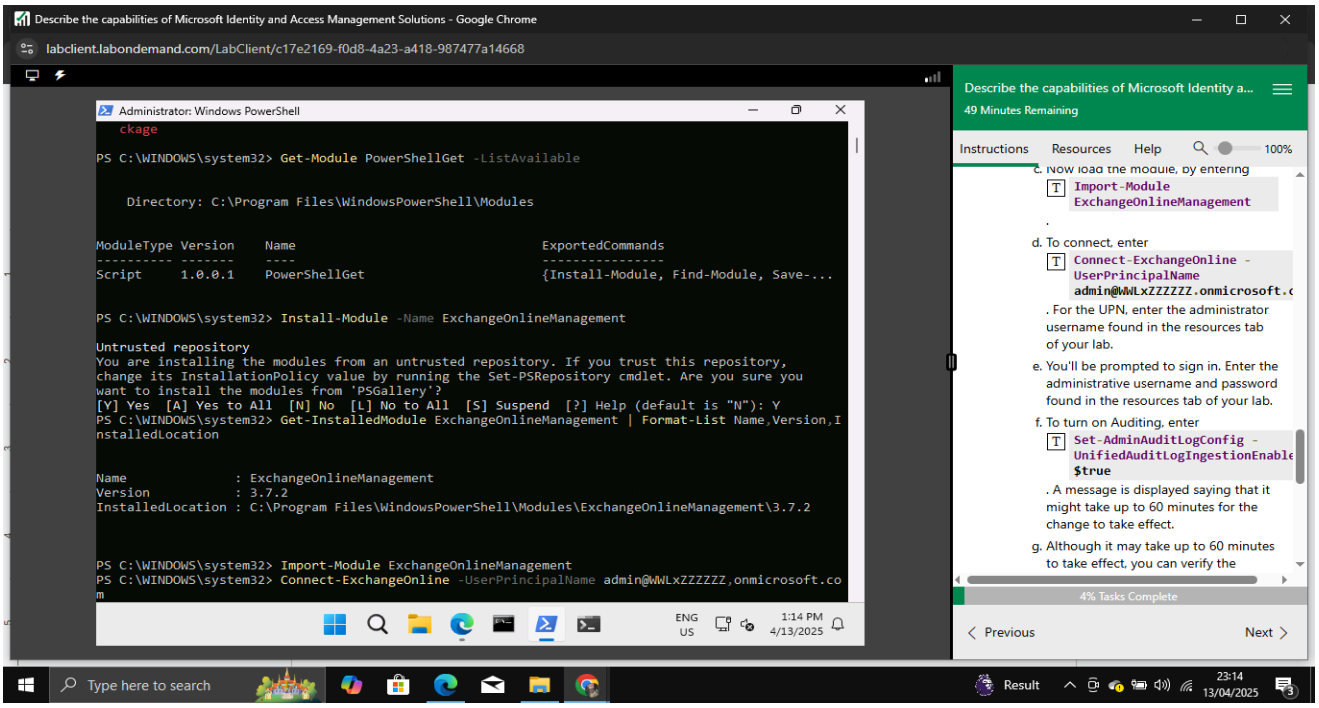
Under Admin centers,I selected Security, and a new browser page opened to the welcome page of Microsoft Defender.

Step 5

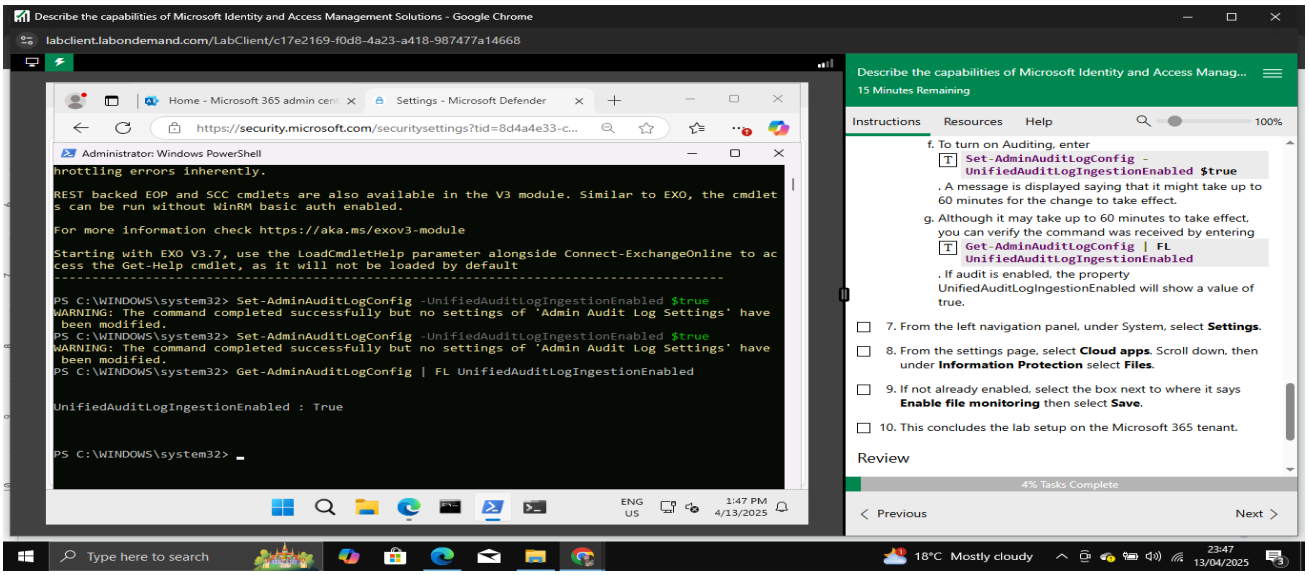
From the left navigation panel, I expanded on System and selected Audit.

Step 6

I clicked the Start recording user and admin activity bar but received an error message indicating trouble detecting activity. After refreshing the page with no change, I was required to enable auditing via PowerShell. I ran PowerShell as an administrator, confirmed the Exchange Online module was installed, loaded it, connected using the admin credentials from the resources tab, and successfully enabled auditing.



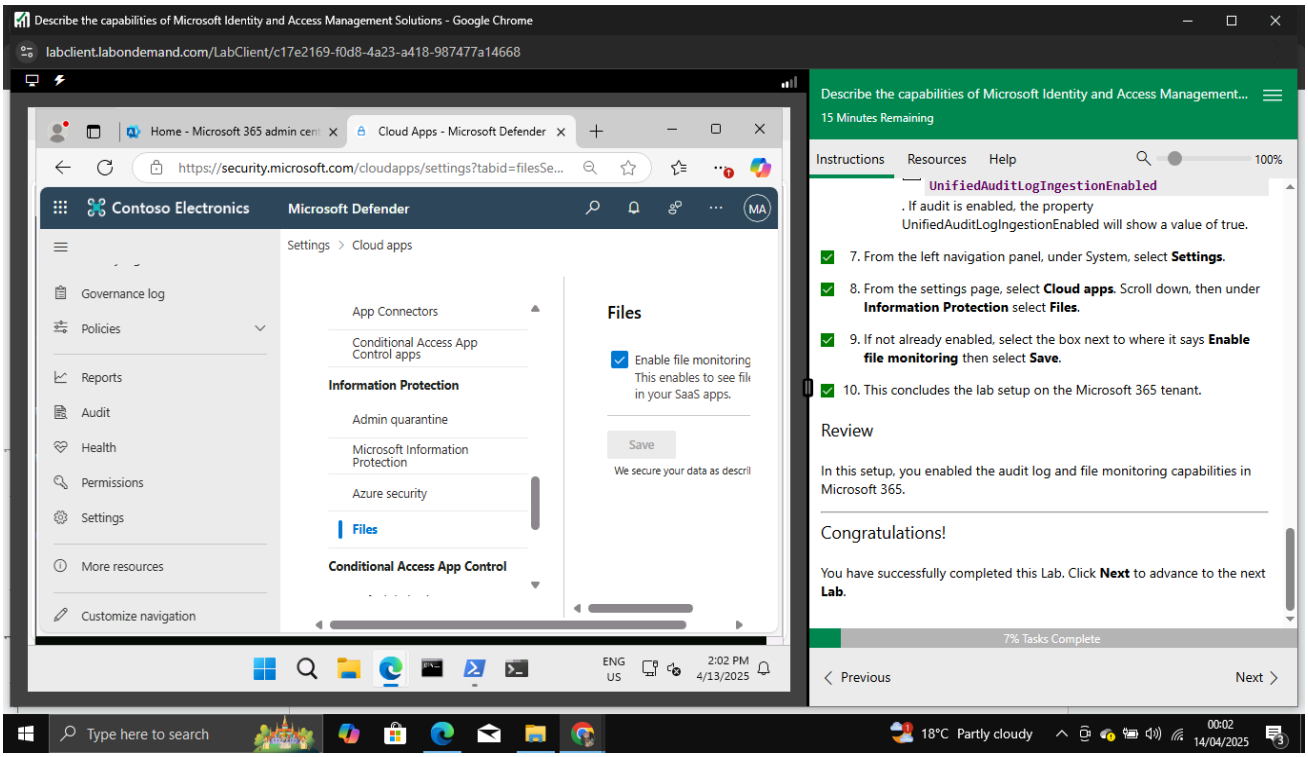
I verified that audit is enabled by checking that the property UnifiedAuditLogIngestionEnabled shows a value of true.Here is my screenshot



Step <u>7,8,9 and 10</u>

From the left navigation panel under system, I selected settings then cloud apps, under information protection,I selected files, enabled file monitoring and saved.

Here is my screenshot



1.3 LAB 2:EXPLORE MICROSOFT ENTRA ID USER SETTINGS

LAB SCENARIO

In this lab I was required to access Microsoft Entra ID (previously referred to as Azure Active Directory). Additionally, create a user and configure the different settings, including adding licenses.

TASK 1

Step 1

I accessed Microsoft Edge using the provided link, signed in with the Microsoft 365 credentials from the authorized lab host, and was directed to the Microsoft 365 admin center page.

Step 2

Under Admin centers, I selected Identity. A new browser page opened to the overview page of the Microsoft Entra admin center.

Step 3

From the left navigation pane, I expanded Users, then selected All users and noticed that my tenant was already configured with users.

Step 4

From the top of the page, I selected Add a new user and created a new user with the principal name Sara.

Step 5

I followed the instructions provided to finish creating the user Sara and moved on to the next step.

Step 6

Here, I was required to configure a few fields in the Properties tab, including Sara's first name, last name, and country/region.

Step 7

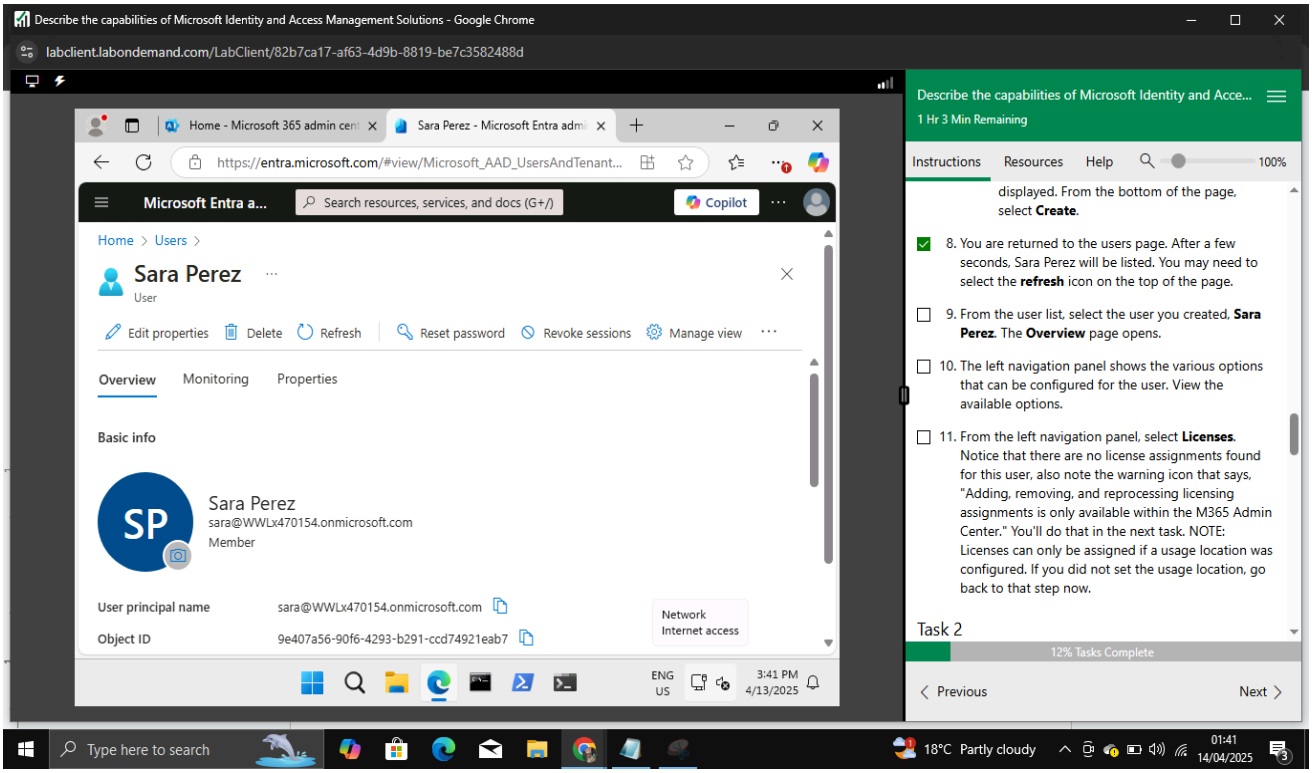
On the Assignments tab, I added a group assignment and viewed the available options for adding a role. I then proceeded to the Review and Create section, where a summary of the settings was displayed.

Step 8

I successfully created the user Sara Perez and viewed her on the Users page.

Step 9

I selected the user Sara to view the overview page.Here is my screenshot



Step 10

From the left navigation panel, I viewed the various options that could be configured for the user.

Step 11

I selected the Licenses option and noticed that there were no license assignments for the user Sara.

TASK 2

In this task, I was required to assign a license to the user I created in Task 1, using the Microsoft 365 admin center..

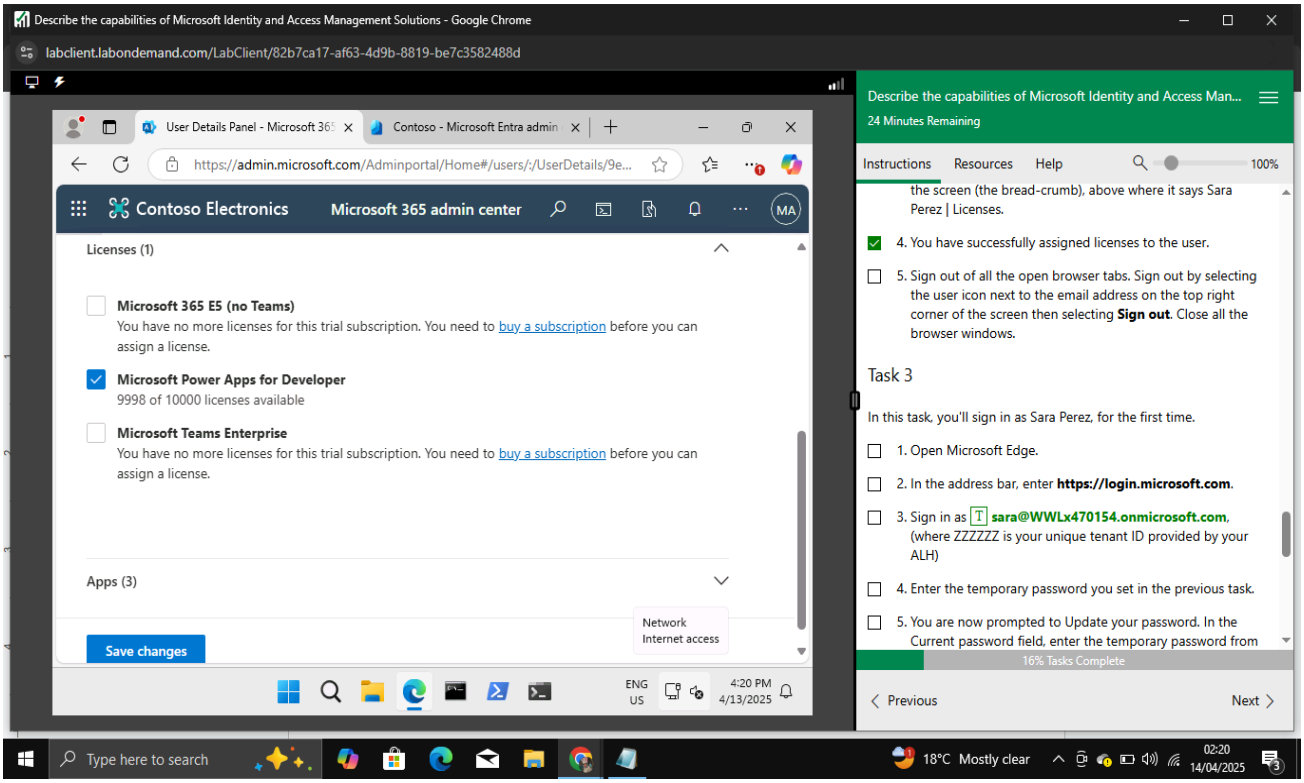
Step 1

I opened the browser tab Home - Microsoft 365 admin center.

Step 2

From the left navigation panel, under Users, I selected Active users and chose Sara Perez. A window opened with her details. On the Licenses and apps tab, I assigned her the Microsoft Power Apps Developer and Microsoft Power Automate Free licenses by checking the boxes and saving the changes.

Here is my screenshot



TASK 3

In this task, I was required to sign in as Sara Perez. I opened the Microsoft Edge browser, navigated to the provided link, and signed in as Sara. I was prompted to change the password, after which I was successfully signed in as Sara Perez. I noted that the licenses I had assigned to Sara in the previous task were limited to Power Automate Free and Power Apps for Developer.

1.4 LAB 3:MICROSOFT ENTRA SELF-SERVICE PASSWORD RESET

LAB SCENARIO

In this lab, as an admin, I walked through the process of adding a user to the SSPR security group. With SSPR enabled, I assumed the role of a user, registered for SSPR, and reset my password. Lastly, I viewed audit logs, usage data, and insights for SSPR.

TASK 1

In this task, I walked through some of the available configuration settings for SSPR.

Step 1

I navigated to the browser with the provided link and signed in with the Microsoft 365 credentials provided. I completed the MFA registration process, signed in, and was taken to the Microsoft 365 admin center page..

Step 2

From the left navigation panel, I expanded the selection for Protection and selected Password Reset.

Step 3

The properties for self-service password reset were displayed. I selected the information icon next to "Self-service password reset enabled" to view the description and ensured that "Selected" was highlighted in blue. I also hovered over the information icon next to "Select group" to view its description and noted the blue information box at the end.

Step 4

From the left navigation panel, I selected Authentication Methods.

Step 5

I then selected 1 in the number of methods required to reset.

Step 6

The different methods available to users also included Email and Mobile phone

Step 7

From the left navigation panel of Password reset,I selected Registration.

Step 8

I ensured that the setting to require users to register when signing in was set to Yes and left the number of days before users were asked to reconfirm their authentication information at the default of 180..

Step 9

From the left navigation panel of Password Reset, I selected Notifications.

Step 10

I ensured the setting to notify users on password resets was set to Yes and left the setting for notifying all admins when other admins reset their passwords as No.

Step 11

The Password Reset navigation pane also included options to view audit logs and Usage & Insights.

Step 12 and 13

I closed the Password Reset window and kept the Microsoft Entra window open.

TASK 2

In this task, I was required to add the user I created in the previous lab exercise to the SSPR security group..

Step 1

I opened the browser tab for the homepage of the Microsoft Entra Admin Center and expanded on Identity.

Step 2

From the left navigation panel of Identity, I expanded Groups and then selected All Groups.

Step 3

In the Search groups field, I entered SSPR, then from the search results selected SSPRSecurityGroupUsers and was taken to the configuration option for that group..

Step 4

From the left navigation pane, I selected Members.

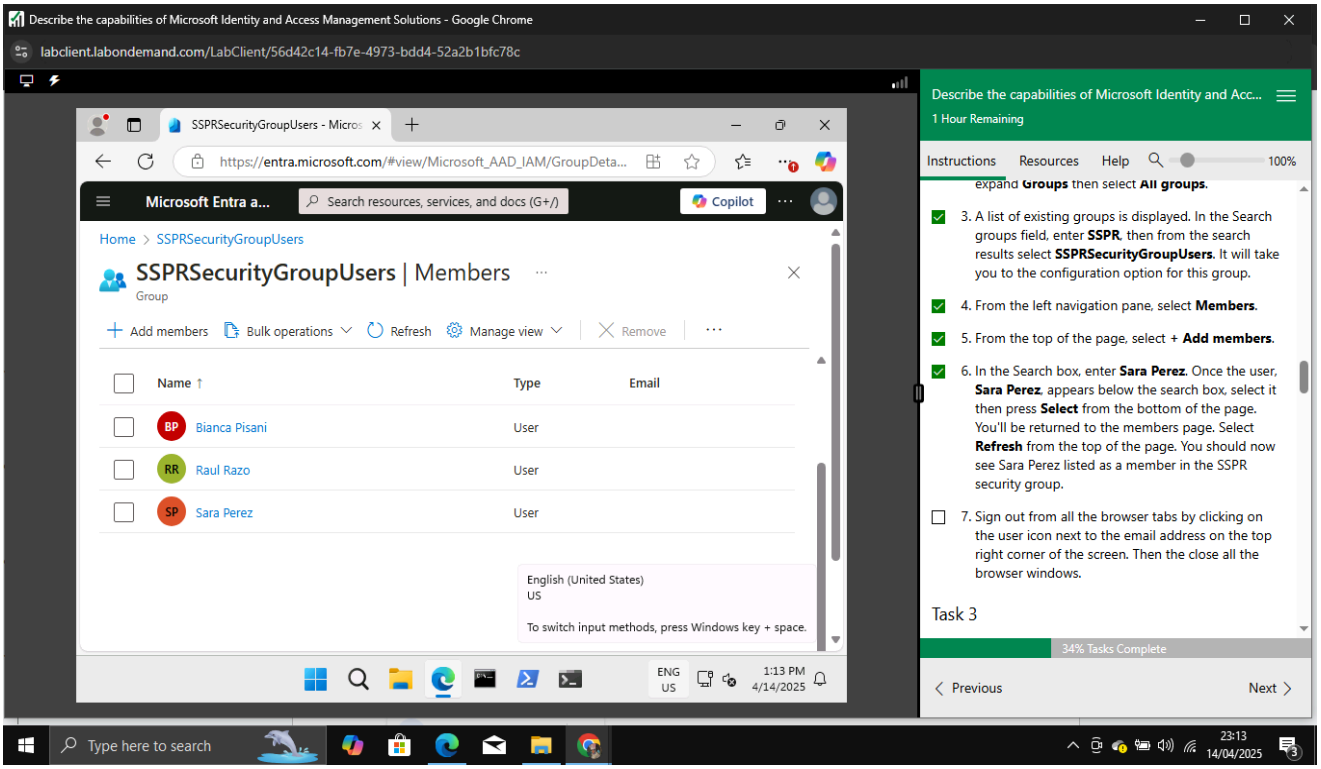
Step 5

I then selected Add member from the top of the page.

Step 6

I added Sara Perez to the SSPR security group by searching her name, selecting it, and clicking the Select button at the bottom. Sara was then listed as a member.

Here is my screenshot



Step 7

I signed out from all the browsers, closed the browser window, and completed the task.

TASK 3

In this task, as user Sara Perez, I went through the registration process for self-service password reset.

Step 1

I opened the browser window and entered the link address provided.

Step 2

I then signed in as Sara Perez and proceeded with MFA authentication.

Step 3,4 and 5

A pop-up displayed indicating that more information was required. This was because, as a member of the SSPRSecurityGroupUsers group, the configuration required its members to register when they signed in. I selected the Next button. The "Keep your account secure" page opened. The window that appeared and the steps that followed were for the Microsoft Authenticator app method. I followed the steps on my Microsoft Authenticator app on my phone to complete signing in.

TASK 4

In this task, as user Sara Perez, I went through the process of resetting my password.

Step 1,2 and 3

I visited the Microsoft login page and logged in as sara.

Step 4 and 5

From the enter password window, I selected the "Forgot password" option, and the "Get back into your account" window opened, where I was required to verify Sara's email.

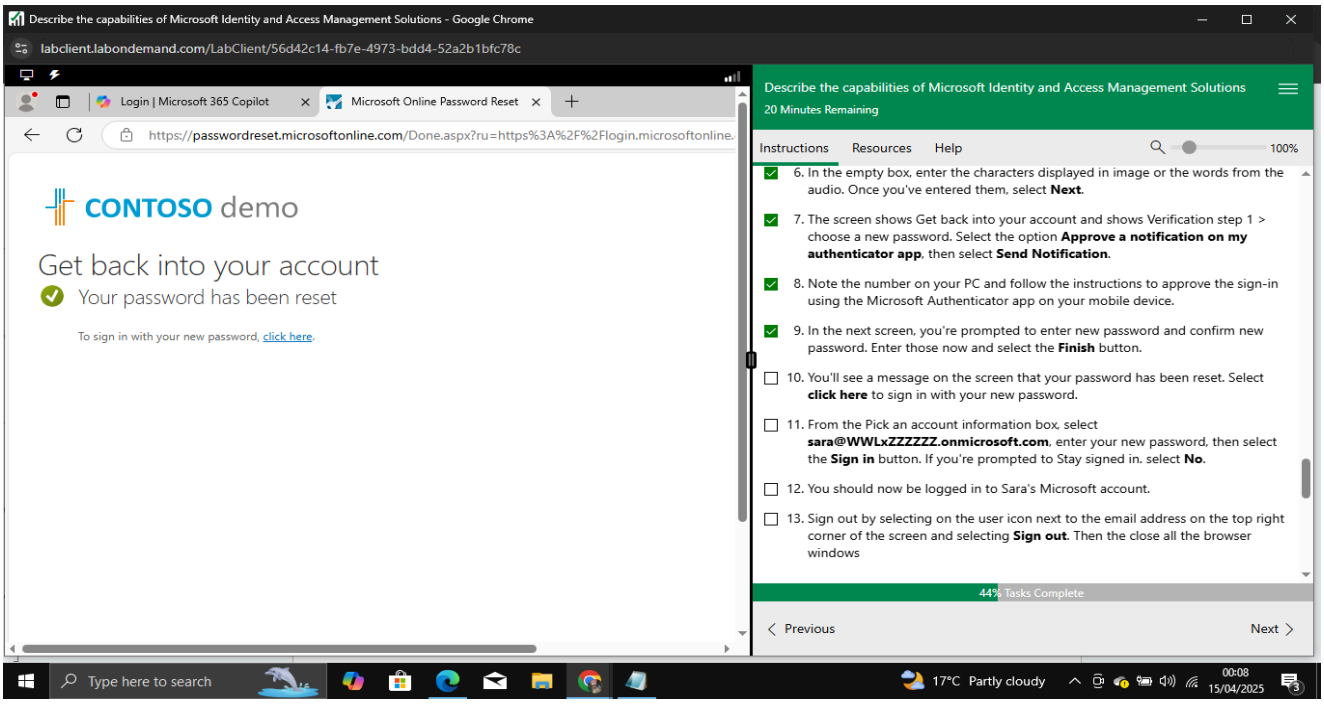
Step 6 and 7

In the empty box, I entered the characters displayed in the image or the words from the audio, then selected "Next." The screen showed "Get back into your account" and displayed "Verification step 1 > choose a new password." I selected the option "Approve a notification on my authenticator app," then clicked "Send Notification."

Step 8 and 9

I followed the instructions to approve the sign-in using the Microsoft Authenticator app on my mobile device. In the next screen, I was prompted to enter a new password and confirm the new password, and I was able to get back into the account.

Here is my screenshot



Step 10,11.12.and 13

On the screen that indicated the password had been reset, I selected the "click here to sign in with the new password" option and was able to log in as Sara.

TASK 5

In this task, as the administrator, I briefly viewed the Audit logs and the Usage & insights data associated with password reset.

Step 1 and 2

I opened the browser, navigated to Microsoft Entra sign-in, and signed in with the Microsoft 365 admin credentials provided by the authorized lab hoster (ALH)..

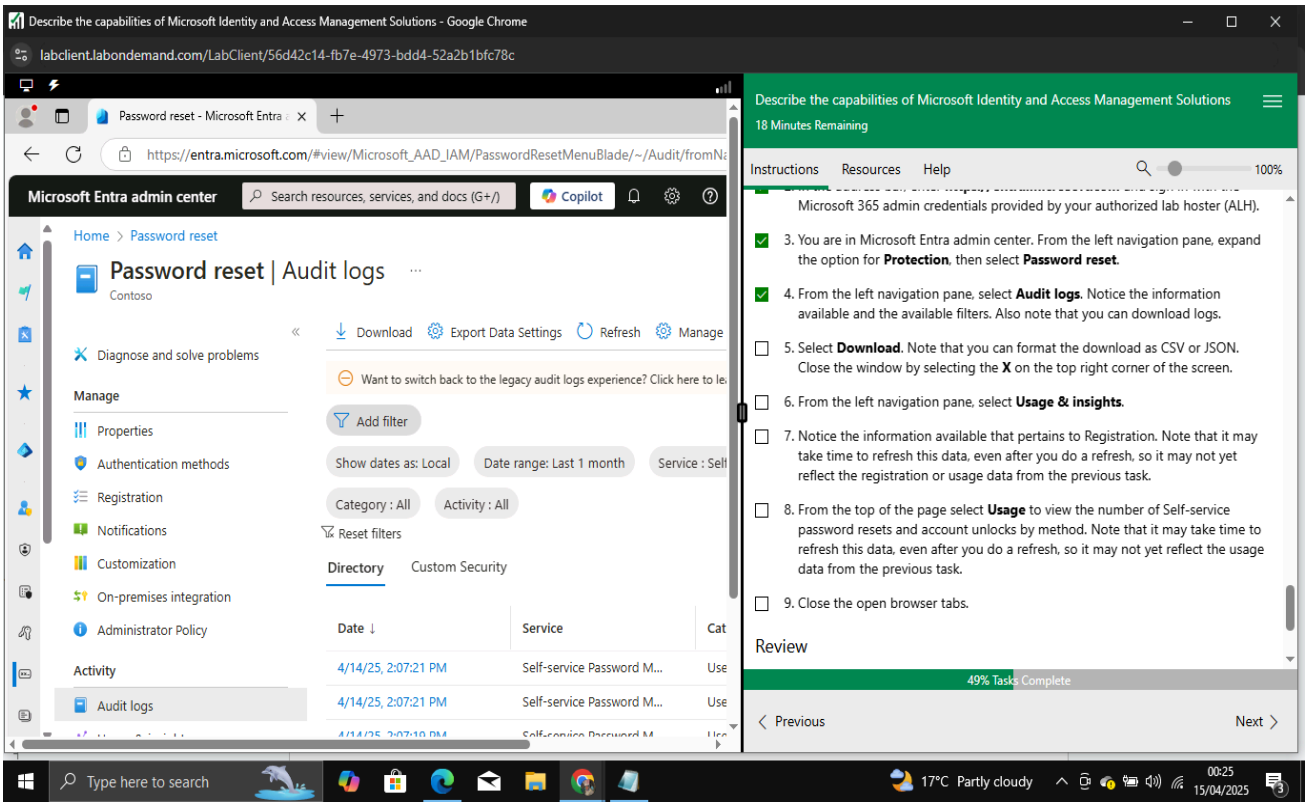
Step 3

In the Microsoft Entra admin center, from the left navigation pane, I expanded the option for Protection, then selected Password reset.

Step 4

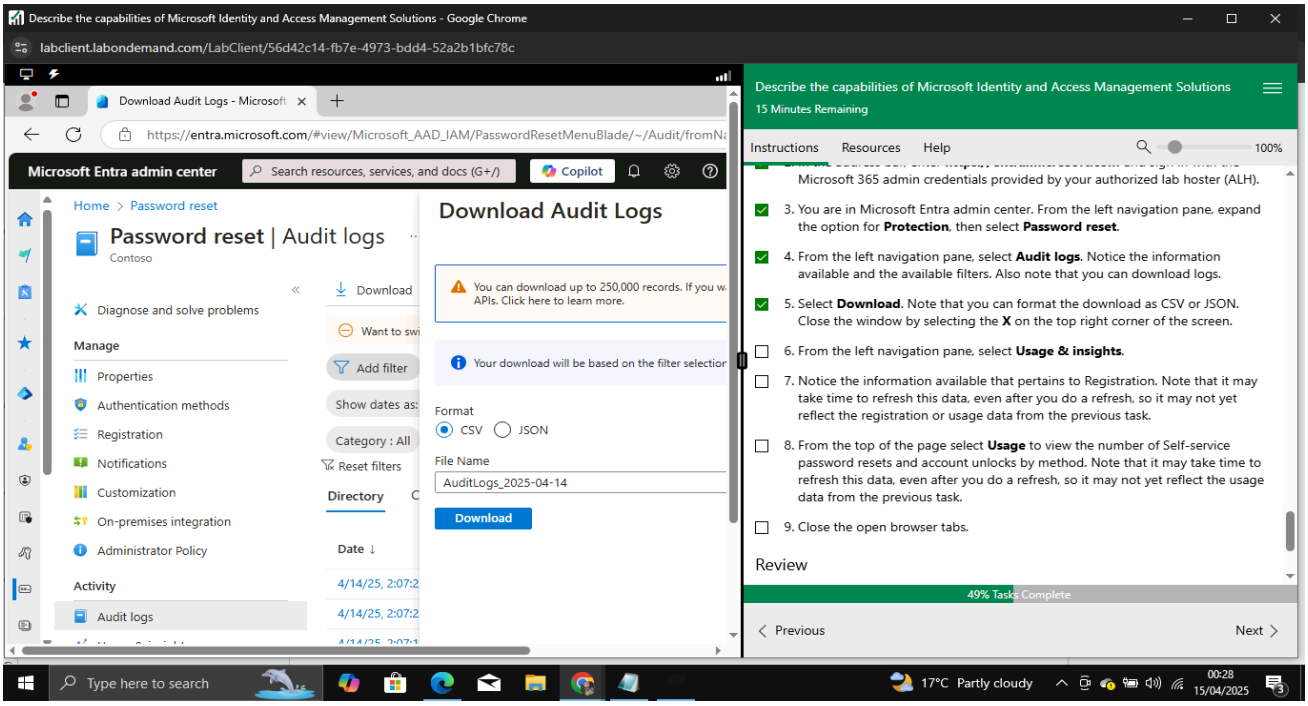
I then selected Audit logs from the left navigation panel and noticed the information available, the available filters, and the download logs option.

Here is my screenshot



Step 5

I selected download and noted that I could format the download as CSV or JSON.
Below is my screenshot



Step 6,7 and 8

From the left navigation pane, I selected Usage & insights and noted the information available that pertained to Registration. I selected usage at the top to view the number of Self-service password resets and account unlocks by method.

Step 9

I closed the browser tabs and concluded the task.

1.5 LAB 4:MICROSOFT ENTRA CONDITIONAL ACCESS

LAB SCENARIO

In this lab, I explored conditional access MFA from the perspective of both an admin and a user. As the admin, I created a policy that required a user to go through multi-factor authentication when accessing any of the Microsoft Admin portals. From a user perspective, I saw the impact of the conditional access policy, including the process to register for MFA.

TASK 1

In this task, as the admin, I reset the password for the user Debra Berger.

Step 1

I opened my browser,signed in with my admin credentials and was taken to the Microsoft 365 admin center page.

Step 2

From the left navigation pane, I expanded Identity, Users, then selected All users.

Step 3

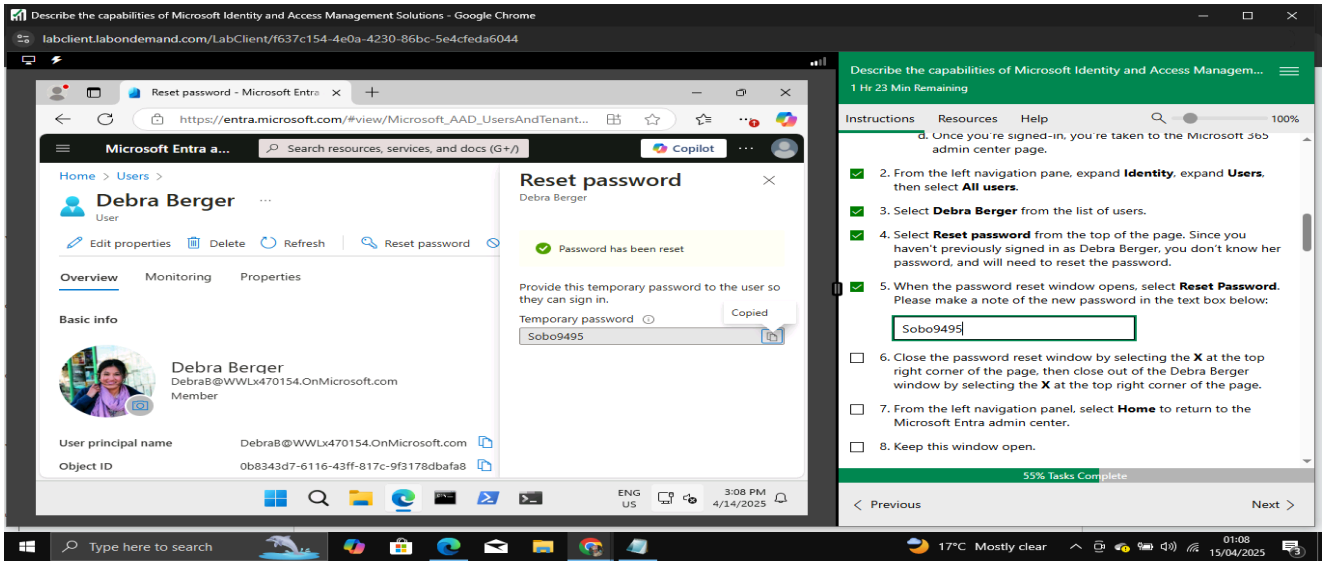
I then selected Debra Berger from the list of users.

Step 4

I selected the reset password from the top of the page. Since I hadn't previously signed in as Debra Berger, I didn't know her password, and needed to reset it.

Step 5

When the password reset window opened,I selected the reset password and made note of the new password.Here is my screenshot



Step 6,7 and 8

I closed the password reset window and returned to the Microsoft Entra admin center.

TASK 2

In this task, I went through the process of creating a conditional access policy in Microsoft Entra ID.

Step 1 and 2

At the home page of the Microsoft Entra admin center, from the left navigation pane, I expanded Protection then selected Conditional Access.

Step 3

The Conditional Access overview page was displayed. When I landed on the overview page, the Getting started tab was selected (underlined). I selected the Overview tab. There, I saw tiles showing the Policy summary and general alerts.

Step 4

From the left navigation panel, I selected Policies then new policy.

Step 5 and 6

In the Name field, I entered Block admin portals and under users, I selected 0 users and groups.

Step 7 and 8

Under the option to Include or Exclude users or groups. I made sure Include is selected (underlined) and then selected the option for Select users and groups and select Users and groups. The window to Select users and groups opens.

Step 9

In the Search bar, I entered Debra, selected Debra Berger from beneath the search bar, then pressed the Select button at the bottom of the page.

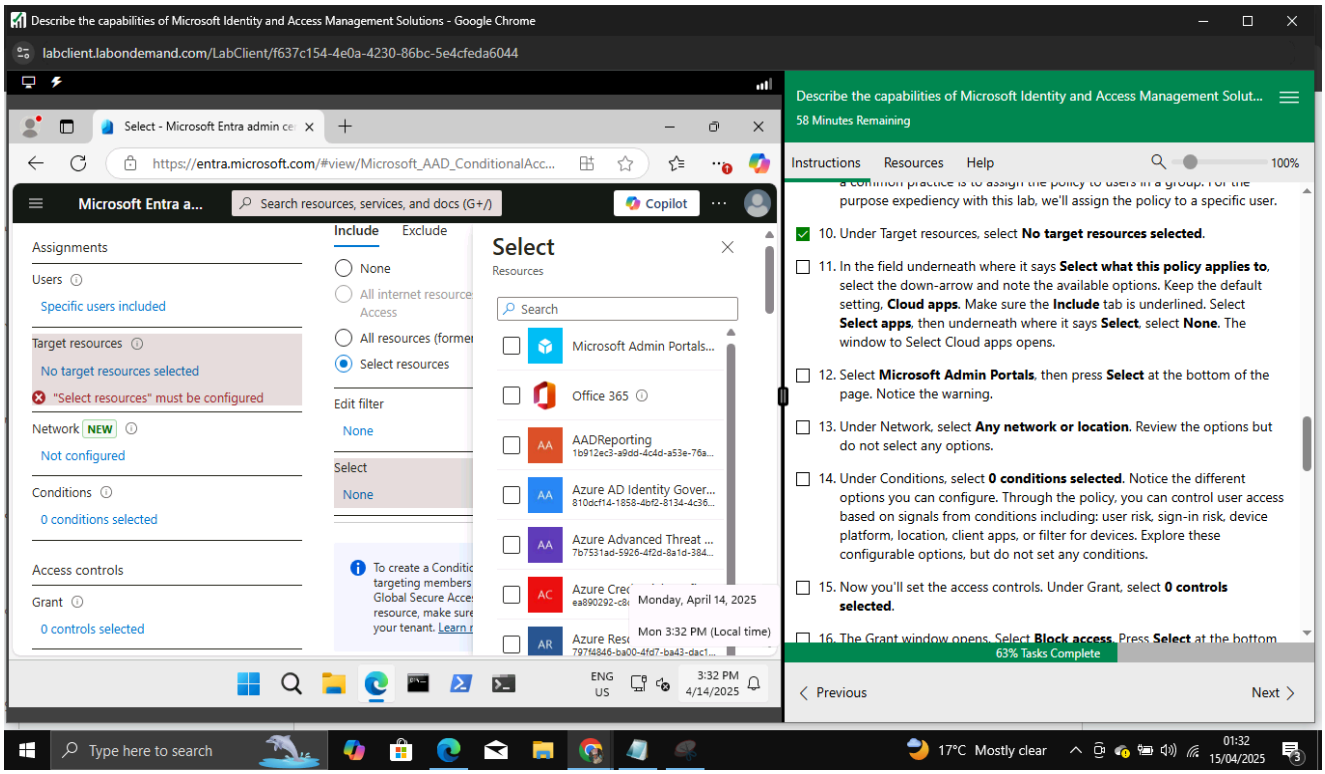
Step 10

Under Target resources, I selected No target resources selected.

Step 11

In the field underneath where it said "Select what this policy applies to," I selected the down-arrow, kept the default setting, Cloud apps, made sure the Include tab was underlined, selected "Select apps," then underneath where it said "Select," selected "None." The window to Select Cloud apps opened.

Here is my screenshot



Step 12

I selected Microsoft Admin Portals, then pressed Select at the bottom of the page.

Step 13

Under Network, I selected any network or location and reviewed the options.

Step 14

Under Conditions, I chose 0 conditions selected and noticed the different options I could configure.

Step 15 and 16

Under Grant, I clicked on 0 controls selected, and the Grant window opened. I then selected Block access and pressed Select at the bottom of the page.

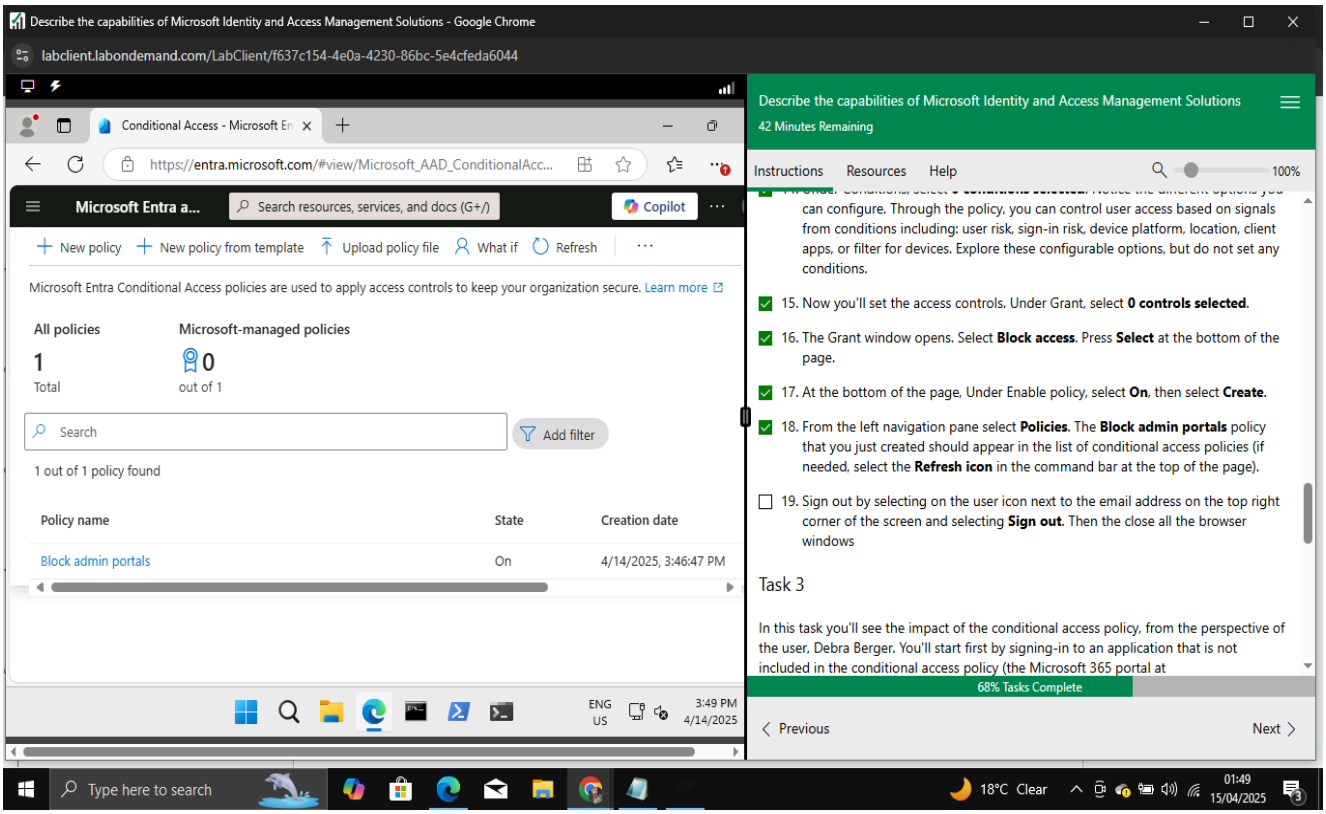
Step 17

At the bottom of the page, under Enable policy, I selected On, then Create.

Step 18

From the left navigation pane, I selected Policies, and the Block admin portals policy that I created appeared.

Here is my screenshot



Step 19

I then signed out, closed the browser window completing this task

TASK 3

In this task, I observed how a conditional access policy affected user Debra Berger. First, I signed in to a non-restricted app (Microsoft 365 portal), then to a restricted one (Azure portal), which was blocked by the policy.

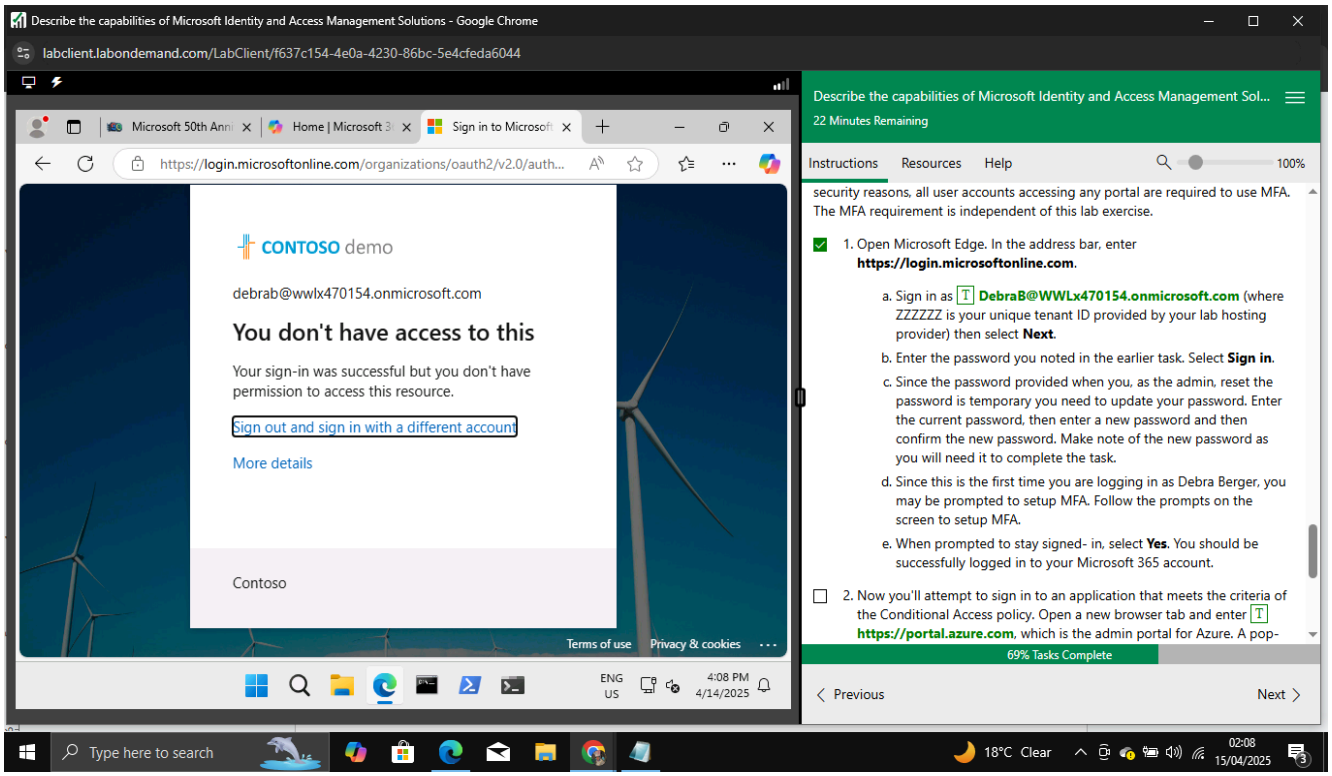
Step 1

I opened Microsoft Edge, signed in as Debra with the password I had noted in the earlier task, and updated the password.

Step 2

When I tried to sign in to the admin portal for Azure, a message saying "You don't have access to this" appeared, indicating that the Conditional Access policy had blocked access to Microsoft admin portals.

Here is my screenshot



Step 3

I signed out of the user and closed all the browsers, concluding this task.

1.6 LAB 5:EXPLORE PRIVILEGE IDENTITY MANAGEMENT

LAB SCENARIO

In this lab, I used Privileged Identity Management (PIM) to assign Diego Siciliani the User Administrator role, requiring Microsoft Entra ID P2 licenses for both me and Diego..

TASK 1

In this task, as the admin, I reset the password for the user Diego Siciliani.

Step 1 and 2

I opened Microsoft Edge, logged in with my Microsoft 365 admin credentials, and was taken to the Microsoft 365 admin center page..

Step 3

From the left navigation panel, I expanded Identity, Users, then selected All users.

Step 4

I then selected Diego Siciliani from the list of users.

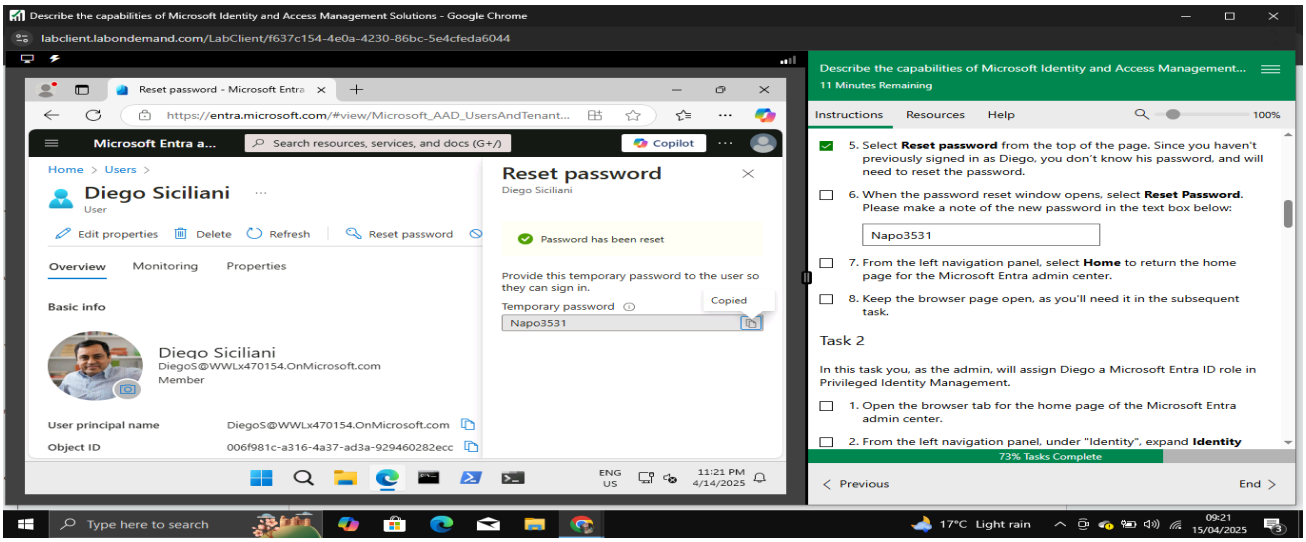
Step 5

I selected the reset password since I hadn't signed in as Diego before and didn't know his password..

Step 6

I clicked the "Reset Password" in the password reset window and noted the new password in the text box.

Here is my screenshot



Step 7 and 8

I was instructed to select Home from the left navigation panel to return to the Microsoft Entra admin center homepage and keep the browser open for the next task.

TASK 2

In this task, as the admin,I was instructed to assign Diego a Microsoft Entra ID role in Privileged Identity Management.

Step 1

I opened the browser tab for the home page of the Microsoft Entra admin center.

Step 2

From the left navigation panel, under "Identity," I expanded Identity Governance, then selected Privileged Identity Management.

Step 3

In the Privileged Identity Management quick start page, I reviewed the information on the Get started page and selected manage in the main window, under where it said Manage access.

Step 4

I was directed to the Contoso Roles page, where I entered "user" in the search bar and selected User Administrator from the search results.

Step 5

From the top of the page, I selected + Add assignments.

Step 6

On the “Add assignments” page, I ensured that Membership was underlined, as this is where I would configure the membership settings for the User Administrator role in PIM.

Step 7

I left the scope type to its default value, Directory.

Step 8

Under “Select members”, I was instructed to click on “No member selected”, which opened the “Select a member” window.

Step 9

I searched for Diego, selected Diego Siciliani from the results, and clicked Select at the bottom of the page.

Step 10

Under “Select members”, I saw 1 Member(s) selected with Diego Siciliani’s details, then clicked Next at the bottom of the Add assignments page.

Step 11

In the Setting page, I left the Assignment type to the default setting, Eligible.

Step 12

I then selected Permanently eligible, to remove the checkmark.

Step 13

In the Assignment start fields, I kept the default date and time, which was today and the current time.

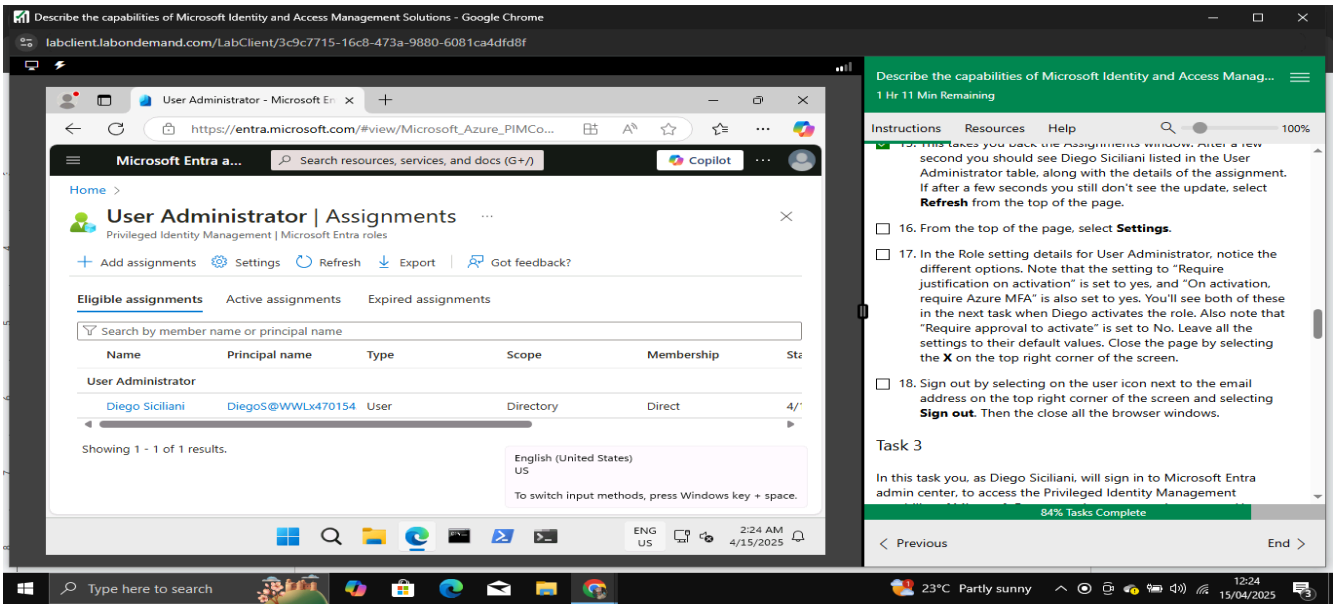
Step 14

I set the Assignment end date to today and adjusted the time to two hours from the current time. After setting the time, I pressed Tab and clicked Assign at the bottom of the page.

Step 15

I was taken back to the Assignments window. After a few seconds, I saw Diego Siciliani listed in the User Administrator table, along with the details of the assignment.

Here is my screenshot



Step 16

I then selected settings from the top page.

Step 17

In the Role setting details for User Administrator, I noticed the different options available, that the setting to “Require justification on activation” was set to yes, and “On activation, require Azure MFA” was also set to yes.

Step 18

I then signed out, closed all browser windows and completed this task.

TASK 3

In this task, acting as Diego Siciliani, I was instructed to sign in to the Microsoft Entra admin center to access Privileged Identity Management and activate my User Administrator assignment. Once activated, I would make configuration changes to an existing user. It was noted that a mobile device with the Microsoft Authenticator app was required for this task.

Step 1 and 2

I opened Microsoft Edge, entered the Entra login, and signed in as Diego. Using the temporary password I had saved from an earlier task, I updated the password with a new one..

Step 3

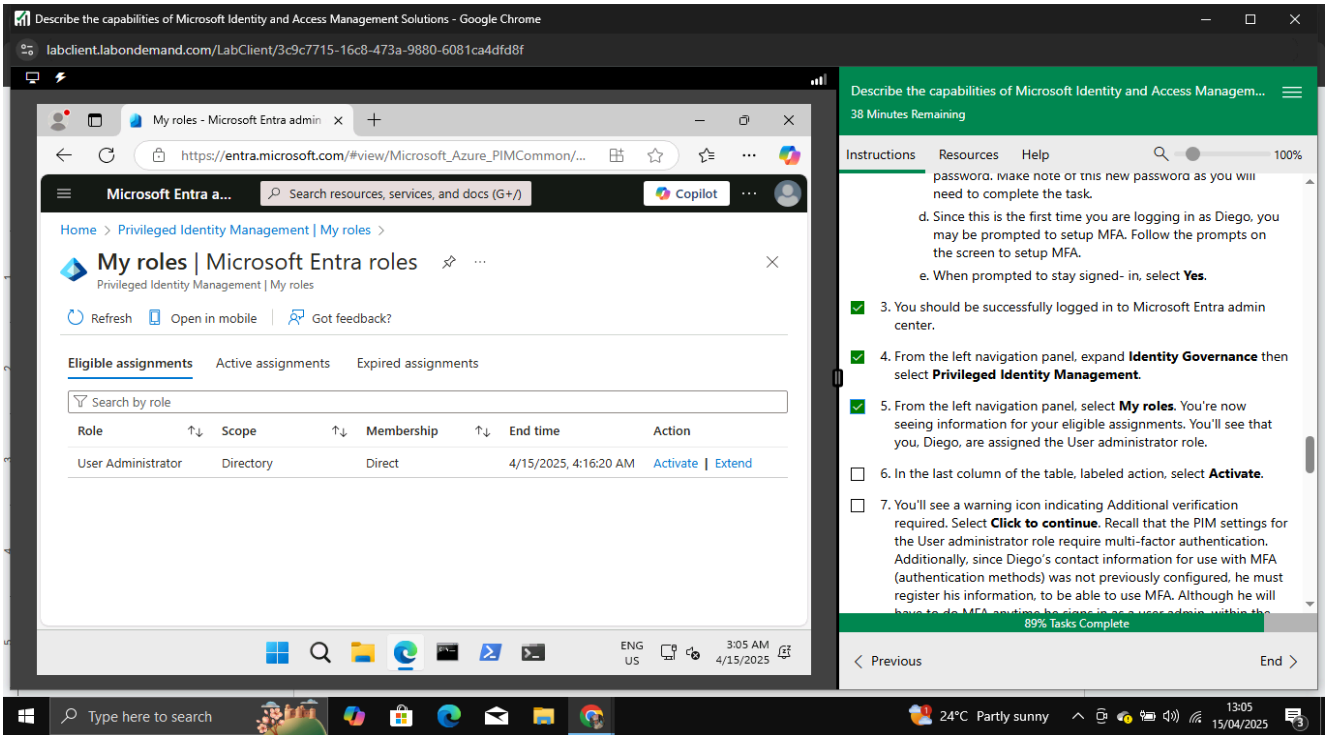
I was successfully logged in to the Microsoft Entra admin center.

Step 4

From the left navigation panel, I expanded Identity Governance then selected Privileged Identity Management.

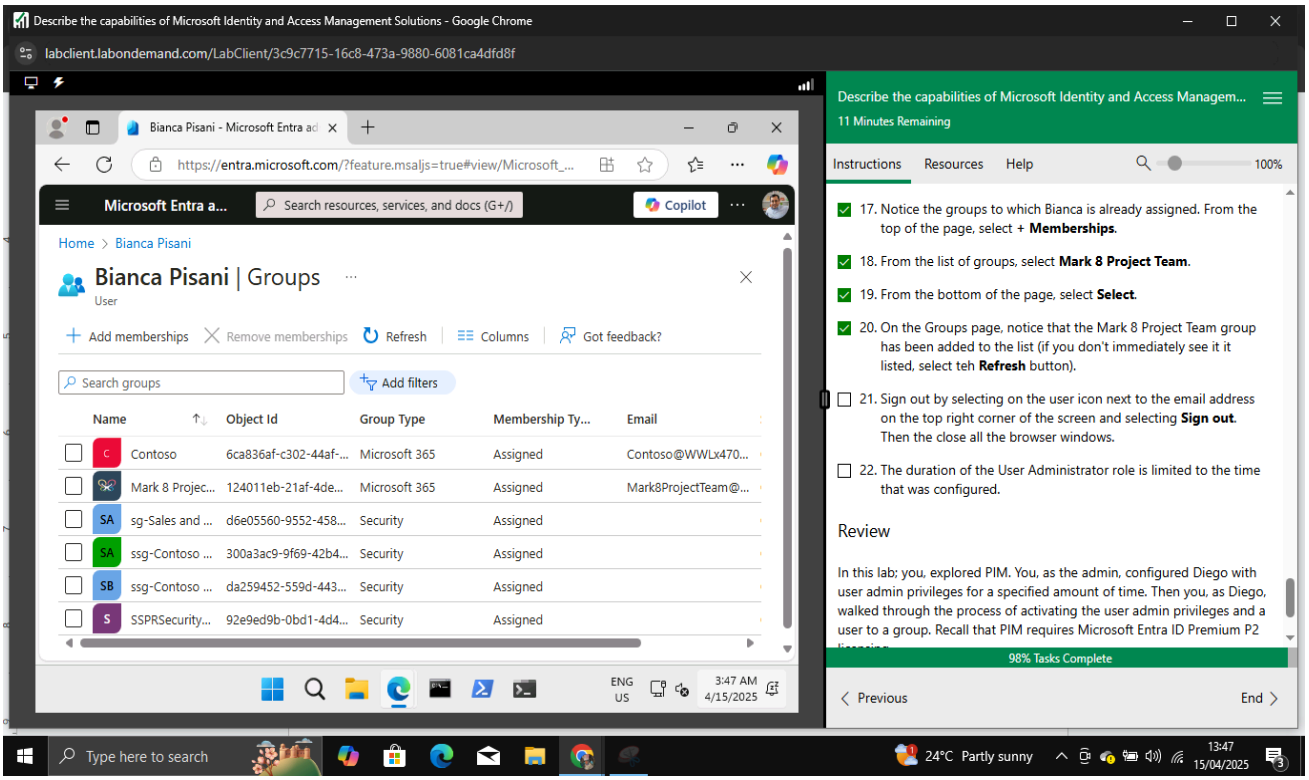
Step 5

I selected My roles from the left navigation panel, where I viewed information about my eligible assignments and saw that Diego was assigned the User Administrator role.Here is my screenshot



Step 6
In the last column of the table, labeled action, I selected Activate.
Step 7,8 and 9
A new window opened, and I was taken to the PIM Active-User Administrator page.
Step 10
I entered a reason for the activation in the box that appeared and activated it.
Step 11
I was able to see the status and the three stages of progress as the activation was processed.
Step 12
Once the activation was completed, I returned to the My roles | Microsoft Entra ID roles page, where I saw a notification stating I had activated a role. I selected the "Click here to view my active roles" link, noticed the end time was different than what was originally configured, and selected the refresh key at the top of the page to return the end time to what was previously configured.
Step 13
I returned to the homepage of the Microsoft Entra admin center by selecting Home from the left navigation panel.
Step 14
From the left navigation panel, I expanded Identity,and selected Users.
Step 15
From the users list, I selected Bianca Pisani.
Step 16
From the left navigation panel, I selected Groups.
Step 17
I noticed the groups to which Bianca was already assigned and then selected add Memberships.
Step 18 and 19
I selected the Mark 8 Project Team from the list of teams and then Select.
Step 20
The Mark 8 Project Team group was then added to the list of Bianca's groups

Here is my screenshot



<u>Step 21 and 22</u>

I signed out and closed all browser windows. It was noted that the User Administrator role would only remain active for the configured duration.

1.7 <u>CONCLUSION AND SUMMARY</u>

Through these labs, I gained hands-on experience with key Microsoft Entra ID and Microsoft 365 admin features. I explored user and role management, including creating users, assigning licenses, and configuring group memberships. I enabled and tested self-service password reset (SSPR) and learned how to access related audit logs and insights. I also implemented a conditional access policy and observed its impact on user access to admin portals. Finally, I worked with Privileged Identity Management (PIM), assigning and activating temporary admin roles, reinforcing the importance of just-in-time access.
